WHO WE ARE

KOR Structural Engineers is a full-service structural engineering firm with offices across North America. Founded on a commitment to technical excellence and client-centred service, we partner with developers, architects, and contractors to deliver innovative, cost-effective structural solutions for residential, commercial, and mixed-use projects of every scale.

WHAT WE DO

Our team of licensed professional engineers provides comprehensive structural engineering services across the full project lifecycle — from schematic design and design development through to construction documents, peer review, and construction administration. We specialize in concrete, steel, mass timber, and hybrid structures, and bring creative problem-solving to every challenge.

WHERE WE WORK

With offices in Vancouver, Vancouver Island, the Okanagan, Edmonton, and the United States, we serve clients throughout Canada and across North America. Our project portfolio spans high-rise residential towers, mid-rise mixed-use developments, commercial buildings, institutional facilities, and specialized structures.

WHY KOR STRUCTURAL

We pride ourselves on building lasting relationships through responsive communication, collaborative design, and a genuine commitment to structural excellence. Our engineers bring deep expertise and personal dedication to every project — delivering structures that are safe, efficient, and built to last. When you work with KOR, you get a team that cares about your project as much as you do.

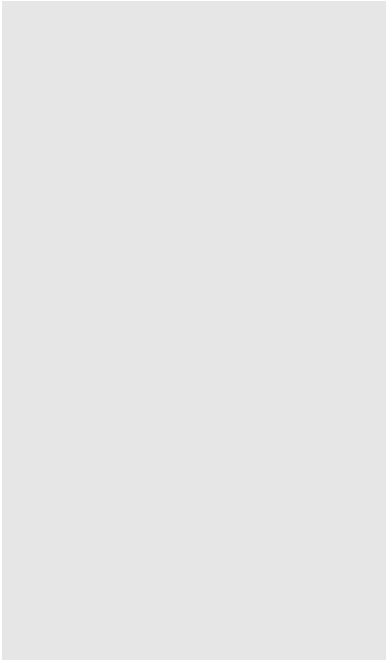

"Like a hive, we build strength through collaboration."
— John Markuli, Managing Principal

"Like a hive, we build strength through collaboration."
— John Markulin, Managing Principal

OUR LEADERS

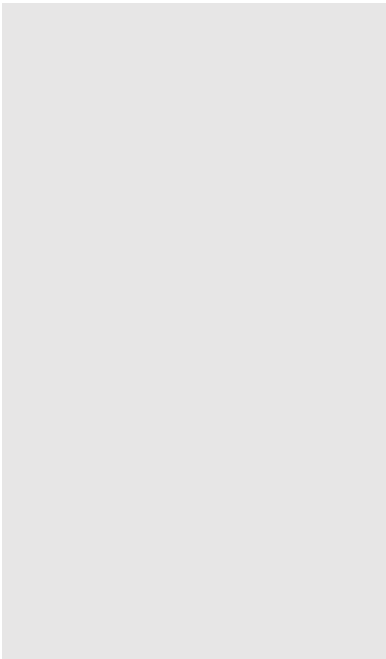

Our team of experienced engineers and technical professionals is the foundation of everything we do. Each member brings specialized expertise, professional dedication, and a shared commitment to delivering exceptional structural engineering.

John Markulin

M.Eng., P.Eng., Struct.Eng., PE, SE

John Markulin is a Managing Principal and Senior Structural Engineer with over 25 years of experience leading complex structural engineering projects across North America. He has directed the design of high-rise residential towers, mixed-use commercial developments, and large institutional facilities throughout Canada and the United States.

Jim DesRoches

BASc., P.Eng., PE

Jim DesRoches is a Managing Principal and Senior Structural Engineer with extensive experience in concrete and steel structure design for mid- and high-rise residential and commercial buildings. Jim leads KOR's US operations and brings a collaborative, client-focused approach to every project.

Rory Beirne

M.Eng., P.Eng., Struct.Eng., C.Eng., MStruct E

Rory Beirne is a Principal and Senior Structural Engineer with broad expertise in the design of residential, commercial, and institutional structures. With professional licensure across Canada and the UK, Rory brings an international perspective and rigorous engineering discipline to KOR's Vancouver Island practice.

Omar Alcazar Pastrana

M.Sc., P.Eng.

Omar Alcazar Pastrana is an Associate Principal and Structural Engineer with a Master of Science in structural engineering and professional licensure in British Columbia. He specializes in the analysis and design of complex concrete and steel structures for high-rise residential and mixed-use commercial projects.

Conor Murtagh

BASc., P.Eng.

Conor Murtagh is an Associate Principal and Senior Structural Engineer leading KOR's Okanagan practice. With expertise in residential and commercial structural design, Conor brings strong technical skills and a commitment to client service to projects throughout the interior of British Columbia.

Islam Shabana

Ph.D., P.Eng.

Islam Shabana is a Senior Structural Engineer with extensive experience in the design and analysis of high-rise residential and commercial structures. With a doctorate in structural engineering and professional licensure in Alberta, Islam brings rigorous analytical skills and a deep understanding of complex structural systems to every project. He specializes in concrete and steel structures, seismic design, and the structural assessment of existing buildings.
