

Your Ward Village client has opened 7,250 acres in three other markets.

Howard Hughes filed a Las Vegas multifamily pre-application yesterday, thirty-nine Houston land filings since December, and owns a master planned community in the Phoenix west valley. None of it names an architect. Alongside that: the Arizona submitted-projects search you asked for, Houston's own spreadsheet naming the developer on 1,426 filings, Hawaii's statewide pre-design bulletin, and five Charlotte petitioners worth a call out of eighty-four.

Six markets, all current

Newest filing: 27 August

Nothing you already design

ON THIS PAGE

- 01 Howard Hughes has opened 7,250 acres since December
- 02 Six markets, and what is open in each one today
- 03 Hawaii publishes its pipeline before design
- 04 Phoenix submitted projects, from the city's own record
- 05 Houston names the developer on every single filing
- 06 The same search, running in all six markets
- 07 Three markets that looked closed are open
- 08 What the layer holds in the rest of your markets
- 09 Four developers that will not hire an outside architect

YOUR OWN CLIENT, IN THREE MARKETS YOU HAVE NOT BUILT FOR THEM IN

Howard Hughes has opened 7,250 acres since December, and none of it names an architect

You build for Howard Hughes at Ward Village. Over the last nine months the same company has been filing in three of your other five markets — land actions, not buildings, which is the stage before anyone is appointed. None of it carries an architect’s name.

FILED	MARKET	WHAT WAS FILED	RECORD
27 Aug yesterday	Las Vegas Clark County	A multifamily application prereview — the earliest formal step the county has. The ownership disclosure names David O’Reilly (CEO), L. Jay Cross (President) and Carlos A. Olea (CFO)	26-101519
15 Jun	Houston Harris County	Bridgeland Creekland Village general plan — 2,037 acres. A general plan is the first plat step for a master development, filed years before vertical product	2026-0982
15 Jun	Houston	Woodlands Village of Sterling Ridge — 450 acres, filed by The Woodlands Land Development Company	2026-0973
9 Feb	Houston	Bridgeland Prairieland Village general plan — 3,905 acres. The largest single filing in the Houston record this year	2026-0191

Thirty-nine plat filings, 7,250 acres, between 19 December and 10 August — all through LJA Engineering. In Las Vegas, thirty-two multifamily pre-applications were lodged in sixty days; Howard Hughes’s is the most recent.

▲ HOW WE KNEW THESE WERE ALL THE SAME COMPANY

The Houston record names *Bridgeland Development, LP* and *The Woodlands Land Development Company, L.P.*, not Howard Hughes. Both appear verbatim in Howard Hughes Holdings’ subsidiaries exhibit — EX-21.1, filed with the SEC 19 February 2026 — alongside Summerlin, Ward Village, and the **Teravalis and Douglas Ranch** entities that make them a landowner in the Phoenix west valley too. A primary document, not a press report, and it is what puts them in four of your six markets at once.

Six markets, and what is open in each one today

Every source below was re-run on 28 August 2026. What this table gives is the layer that exists *before* a design team is appointed — not permits, which are always too late. The markets are not equal, and where one is thin we say why rather than padding it.

MARKET	WHAT IS OPEN IN THE RECORD RIGHT NOW	NEWEST FILING
Las Vegas Clark County	32 multifamily application prereviews in sixty days , sixteen in the last fortnight. The county publishes an ownership disclosure with each, which names the officers behind the filing entity — so a single-purpose LLC still resolves to a real company	27 August yesterday
Houston Harris County	1,426 plat applications across sixteen commission cycles. The city’s own spreadsheet gives the developer company, the filing consultancy, a named applicant and an office phone on every single row — 100% named, with acreage, land use and council district	20 August
Phoenix Arizona	373 open site-plan and rezoning cases , 280 filed since January 2025. Three of them have land-use counsel and a civil engineer retained and no architect named anywhere on the file	Permits 27 August entitlement cases run a quarter behind, to 27 May
Charlotte	84 rezoning petitions pending , petitioner named on every one, no design team on any — because Charlotte publishes the petition before the design exists. Five of the petitioners buy architecture rather than produce it	14 August
Hawaii all four counties	Any project using state or county land or funds must publish an environmental assessment first. Those are gathered twice a month into one statewide bulletin that names the applicant and the planning consultant, with a contact for each: 63 projects so far in 2026, eight residential	23 August
Miami	Thin, and structurally so. Only six rezonings came before the board all year and four were City-initiated, because Miami 21 lets private schemes proceed by warrant instead. The real Miami record is design review — 66 projects — and that is the architect’s own drawings, so it is always after the award	Design review 15 July the board does not sit in August

Concentration figures — who holds what share of each market, and how much of the market each sample covers — are in the companion document, with the working shown. They answer a different question from this page.

✕ WHAT WE DELIBERATELY DID NOT PUT IN FRONT OF YOU

We crossed your published client list against every record below. **Two of your clients matched and both were dropped.** Hines appears three times in the Arizona record, all completed office fit-outs with Phoenix Design One already named. Vestar appears once in the Phoenix rezoning record, on a case that already names Butler Design Group. Neither is an opportunity.

Ward Village, Kalae and Launiu are excluded on the same rule — they are your work, and they appear here only as the reason the Howard Hughes thread is worth your time.

Hawaii publishes its pipeline before design, in one statewide bulletin

Hawaii looked like the hardest of the six. Honolulu’s open data stops at 2016 permits, and its live zoning layers record ordinances that have already passed — the outcome, not the pipeline. The answer is not at the county at all. It is a state publication, and it is better than anything the counties hold.

Under Chapter 343, any project using state or county land or money, touching a shoreline or conservation district, or needing a general plan amendment must publish an environmental assessment. The Office of Planning and Sustainable Development gathers these into **The Environmental Notice**, published on the 8th and 23rd of every month, covering **all four counties in one document**. Each entry names, in a fixed order: every permit still required, the approving agency with a named officer, **the applicant, the planning consultant**, the status, and a description that usually gives the unit count.

An environmental assessment is prepared to win entitlements. It comes before construction documents, and the consultant named on it is a planner, not an architect.

PUBLISHED	PROJECT	APPLICANT	PLANNER ON RECORD
23 Aug Maui	Mākena Mauka — master planned residential community, 652 units including workforce housing, single-family and multi-family. Final EIS accepted , which means entitlement is finishing and the building work is next	AREG AC Makena Propco LLC	Munekiyo Hiraga
23 May Kaua’i	Kilauea Town Expansion — Section 201H affordable housing, 310 units	not stated in the notice	Kahewai Environmental LLC
23 Mar Maui	Ho’onani Village — mixed-use development, at Draft EIS, before the State Land Use Commission. The earliest stage of the three	Ho’onani Development, LLC	Pioneer Design Group–Hawai’i
8 May Maui	Wailuku Mission Senior Affordable Housing	EAH Housing also builds in California	PBR Hawai’i

PUBLISHED	PROJECT	APPLICANT	PLANNER ON RECORD
23 May O'ahu	Mililani High School Teacher Workforce Housing	Pacific Housing Assistance Corporation	PBR Hawai'i

✗ WHAT THIS SOURCE DOES NOT COVER, IN PLAIN TERMS

Chapter 343 is triggered by *state or county involvement*. A wholly private project, on private land, with no shoreline or conservation trigger, never appears. **Ward Village is exactly that kind of project** — which is why your own Honolulu work is not in this bulletin and why the bulletin is no use for finding more of it.

The Kaka'ako pipeline runs instead through the Hawai'i Community Development Authority, whose board is the approving authority for that district. We read its agenda for the **2 September** sitting: one right-of-entry item and a monthly report. **No new development permit is before the board.** That is the state of the district this cycle, not a gap in the search.

THE THING YOU ASKED FOR

Phoenix submitted projects, from the city's own record

Phoenix publishes a live planning and permit service carrying **68,292 permits and 13,022 plan reviews**, row-level. **Its newest record is from yesterday** — but that is not true of every part of it, and the difference matters more than the headline:

WHAT YOU QUERY IN PHOENIX	NEWEST RECORD	WHAT STAGE THAT IS
Building permits	27 Aug 2026 — yesterday	Already designed and building. Fire connections, haul routes, landscape
Site plan and rezoning cases	27 May 2026 — three months back	Entitlement. Where the design conversation happens

Phoenix posts its construction permits the next day and its planning cases about a quarter behind. So the city will tell you today about a job that is already someone else's, and tell you in three months about one that is still being shaped. That is worth knowing before you rely on it, and it is not a defect in the search — it is how that city publishes. Nevada, Miami and Raleigh do not behave this way; Raleigh's development plans were updated the morning this was written.

None of which makes the entitlement list stale in the way a permit list would be. **A scheme that filed a preliminary site plan in May is still in entitlement now** — that process runs in quarters, not days. Filtered to site-plan and rezoning cases the record returns **373 open cases**; filtered to those submitted since 1 January 2025, **280**; of which **around forty read as residential from the project name** — that last step is a judgement on the name rather than a field in the record, so treat it as an indication and not a count. The 373 and the 280 are exact.

The stage column matters as much as the name. A **preliminary** filing is a scheme still being shaped; a **final** one is a scheme committed. Both appear below, and the difference tells you how much of the design conversation is still open.

SUBMITTED	CASE	PROJECT	ADDRESS	STAGE
12 May 2026	2602491	Momentum Apartments	734 E Vineyard Rd	Preliminary site plan
6 May 2026	2602468	Senior Housing at 41st Ave	2700 N 41st Ave	Preliminary site plan
21 Apr 2026	2602361	17th St Apartments	1634 E Wood St	Preliminary site plan
9 Apr 2026	2602015	Sagewood Phase 4 — residential & clubhouse	4400 E Palo Verde Dr	Preliminary site plan
1 Apr 2026	2601847	Virginia Townhome Project	4840 E Virginia Ave	Preliminary site plan
25 Feb 2026	2601066	Maryland Townhomes	742 E Maryland Ave	Final site plan
6 Feb 2026	2600890	Lion Foundation Housing	1415 E Wood St	Preliminary site plan
24 Dec 2025	2507260	Deer Valley Apartments	3010 W Deer Valley Dr	Final site plan — major
11 Dec 2025	2506990	34th & Thomas Apartment Homes	3425 E Thomas Rd	Preliminary site plan
9 Dec 2025	2506904	4th St Residences	4144 S 4th St	Final site plan — major
9 Dec 2025	2506899	Sierra Verde Townhomes	4800 S 16th St	Final site plan — major

Eleven of the forty-one, newest first. The full set travels with this document.

✕ TWO THINGS THIS LIST IS NOT

It is a snapshot, not a trend. Every row carries status OPEN, because closed cases leave the layer. Counting them by year would show 2024 smaller than 2025 and that would mean nothing — older cases have simply had longer to close. Anyone who hands you a submissions-per-year chart built from this feed has made that mistake.

And it does not name your architect competitor. The feed has a field called PROFESS_NAME, populated on 90.6% of plan reviews, and the name promises exactly that. Read the values and it is the licensed *contractor* — the most frequent entries are “TO BE BID”, “OWNER”, fire-sprinkler firms and solar installers. It is genuinely useful for who *builds* in Phoenix. It is not an architect and we will not present it as one.

Scottsdale is the instructive one. Its long-standing case service is the cleanest we tested anywhere — 82 cases with all eight fields populated on all 82 rows, applicant included. And the newest submittal in it is **25 February 2026**, because the city moved to a new portal that January and the old map only covers what came before. **A feed can be flawless and still be frozen**, and the only way to know which you are holding is to query it and read the dates rather than the documentation.

The successor is open. Scottsdale’s current portal answers the public without an account and returns **11,673 permit records and 733 plan records for 2026**, each with number, type, status, parcel, address and applied date. **The city did not stop publishing; it moved.** That is worth checking before any market is written off — three of the six markets here had a feed that looked dead and a live successor nobody had followed.

▲ ON THE TEST YOU SET US

You asked what happens to a 40-storey project filed that morning. **It is not in any public feed yet, and nobody’s is.** It surfaces when the city posts the case or the trade press picks it up. In Raleigh or Miami that is days; **in Phoenix, entitlement cases run about a quarter behind, so there it is months.** We would rather tell you which city is which than average them. The defensible claim is that nothing published gets missed. It is not that nothing unpublished is known, and we would rather say so than have you find out by testing it.

Houston names the developer on every single filing

Houston has no zoning, so there is no rezoning petition to watch, and its state registrations are filed *by the design firm* — which puts every one of them after the appointment. That is why Houston reads as closed. It is not. The Planning Commission publishes the agenda of every cycle as a spreadsheet, and a subdivision plat is filed by the developer’s planner or engineer, to divide land, before a building is designed.

1,426 applications across sixteen cycles this year. The developer company is named on 100% of them — along with the consultancy that filed, a named applicant, an office phone, the acreage, the land use and the council district.

SUBMITTED	DEVELOPER	FILED THROUGH	SCHEME
10 Aug	OctaHomes	Meta Planning + Design	Octa Business Park general plan — 208 acres
10 Aug	Houston Livestock Show and Rodeo	EHRA	Rodeo auxiliary facilities general plan — 316 acres
7 Aug	Brookfield Properties	LJA Engineering	Midline general plan — 591 acres
27 Jul	Taylor Morrison	Meta Planning + Design	Avalon at Cypress — 262 acres
13 Jul	Johnson Development	Meta Planning + Design	Amira general plan — 696 acres
29 Jun	Westside Ventures	Meta Planning + Design	Mason Business general plan — 112 acres
15 Jun	Bridgeland Development Howard Hughes	LJA Engineering	Creekland Village general plan — 2,037 acres

Thirty general plans were filed in 2026 — the earliest plat step there is, and the one that precedes a master development by years. **152 applications since 1 June sit on five acres or more.**

▲ READ THE ACREAGE, NOT THE LAND-USE LABEL

Houston tags 41 filings this year as Multi-Unit Residential, and it would be easy to hand you that list. Most of them are between **0.11 and 0.20 acres** — townhouse and duplex infill on single lots, not a commission for anyone. The filings worth your time are the ones with scale behind them, whatever the label says, which is why the table above is cut on acreage.

THE ACTUAL QUESTION YOU ASKED

The same search, running in all six markets

You asked for Arizona. The fair test of whether that is worth anything to you is whether it runs everywhere you work — so here is the same search, in every market you named, with the date each record was last current.

MARKET	WHAT THE PUBLIC RECORD CURRENTLY HOLDS	CURRENT TO
Phoenix	373 open site-plan and rezoning cases ; 280 filed since Jan 2025; around forty residential , each with its stage	Cases to 27 May permits to 27 Aug
Houston	390 new-construction projects registered since 1 June 2026 alone, running about 370 a month across 2026, each with its scope, cost and floor area	27 Aug 2026
Miami	66 projects through the city's design review since Jan 2024, by address and case number	Jul 2026 sitting
Las Vegas · Clark County	Whole-project permits above \$10M, plus the full permit sequence per scheme — 79 records on the ballpark alone	day queried
Raleigh	Large multifamily permits by year — 15 in 2025, tracking ~11 in 2026	Aug 2026
Charlotte	86 pending rezoning petitions with petitioner and land — but no design team at this stage	Aug 2026

Six markets, one method, and it is current to yesterday in the largest of them.

The Phoenix list is the one you asked to see, so it is printed in full above; the others are the same query pointed at a different city. Nothing here is a subscription feed or a purchased database — it is the public record of each jurisdiction, which is why it can be re-run on any Monday and be right.

▲ THESE ARE ENTITLEMENT-STAGE RECORDS, WHICH IS EARLIER THAN AN ARCHITECTURAL APPOINTMENT

Phoenix's cases are site-plan and rezoning filings. Miami's are design-review submittals. Charlotte's are rezoning petitions. **None of these is a building permit** — they are the stage at which a scheme is still being argued with the city, which is why Charlotte's filings name a petitioner and no design team at all: at that point one has not always been appointed.

That is the stage planning work is bought at, and it sits ahead of the architecture decision rather than after it. The Phoenix table above marks each case preliminary or final for exactly this reason — preliminary is a scheme still being shaped, final is one already committed, and the difference tells you how much of the conversation is still open.

WHAT THIS CAN REACH

Three markets that looked closed are open, and current to today

Clark County, Dallas and Charlotte all publish nothing useful in their open-data feeds — each stopped in 2020, 2021 and 2022 respectively. They did not stop building. **They changed permitting systems, and all three moved to the same platform.** Their live records are public, and reachable without an account:

JURISDICTION	OLD FEED STOPPED	LIVE RECORD, VERIFIED
Clark County — the Strip	Feb 2021	Current to the day queried
Dallas	Mar 2020	Current to the day queried
Charlotte	May 2022	Aug 2026

Worked example. The Athletics ballpark on the former Tropicana site returns **79 county records**, March 2025 to August 2026 — precast packages, electrical, fire apparatus access, grading, phased building permits. That is the construction sequence of the largest project on the Strip, permit by permit, from the public record.

▲ THE EARLIEST SIGNAL A CITY HOLDS

Dallas has logged roughly **197 pre-development meetings in 2026** — the first formal contact a developer has with the city, *before* entitlement, before the design team is chosen, before any of it reaches the trade press. Eighty-nine are visible.

⚠ Being straight about it: those Dallas records carry a date, a number and a status, **but no project name and no address**. It is a measure of how busy the market is, not a list of leads. Clark County does name its projects and their status, so there the same query is genuinely actionable. **The value differs by city and we will always say which.**

Texas does not stop at Houston. Dallas, Fort Worth, Austin and San Antonio are held to the same depth, and that detail already exists — it is left out here for readability rather than because it is missing. Four more market tables would not have made this document better. Ask and it follows.

THE OTHER FIVE

What the layer holds in the rest of your markets

Same standard throughout: a firm appears against a project only where that firm's own page, the developer's own release, or the public record says so. Where the design team is incomplete the gap is shown rather than filled.

MARKET & PROJECT	DEVELOPER	ARCHITECT	CONTRACTOR
NEVADA · A's Ballpark, Las Vegas 33,000 seats, 2028	The Athletics	BIG + HNTB	Mortenson–McCarthy
NEVADA · Bally's Integrated Resort 26 ac, former Tropicana	Bally's Corp / JLL	Marnell Howryla	—
NEVADA · Silverado, Clark County 13.5 ac, heard 2 Sep 2026	Ochoa Development	Gensler + Yihong Liu	—
HAWAII · Kalae, Ward Village 330 homes	Howard Hughes / Victoria Ward	Solomon Cordwell Buenz	Layton
HAWAII · Ālia, Kaka'ako 457 units, 39 storeys	Kobayashi Group	WRNS Studio	—
HAWAII · Launiu, Ward Village 486 homes, 40 storeys	Howard Hughes	Arquitectonica	—
HOUSTON · The Lily River Oaks 38 storeys, 331 units	Southern Land Co.	Solomon Cordwell Buenz	ANDRES

MARKET & PROJECT	DEVELOPER	ARCHITECT	CONTRACTOR
HOUSTON · The Langley 20 storeys, 134 units	StreetLights + Hunt	StreetLights Creative Studio	SLR
DALLAS · Lucille, Uptown 22 storeys, 265 units	Endeavor Real Estate	HKS	Rogers-O'Brien
MIAMI · Waldorf Astoria 100 storeys, 360 residences	PMG	Sieger Suarez + Carlos Ott	—
MIAMI · Delano Residences 90 storeys	PMG	Carlos Ott · CUBE3 (AOR)	—
CHARLOTTE · Queensbridge Collective 755 units, \$725M	Riverside + Woodfield + PGIM	Goettsch Partners	Clark
RALEIGH · Tributary, North Hills 332 units	Kane Realty	Hickok Cole	John Moriarty

Every architect above was read off the developer's own release, the architect's own project page, or the city record — never inferred. A dash means no public record names that role yet, which is not the same as the role being unfilled, and we would not present it as one.

Two developer names are worth isolating. *PMG* holds both Miami supertalls and used Carlos Ott on each, with CUBE3 carrying architect-of-record on the second — a developer running the same design relationship twice. *Kobayashi Group* is the counter-example: an independent Honolulu developer, sitting under Kamehameha Schools' Kaia'ulu 'o Kaka'ako master plan, which means **more towers behind it on the same landowner's ground.**

▲ ONE PATTERN WORTH YOUR ATTENTION

SCB — formerly Solomon Cordwell Buenz — is in two of your six markets — Kalae in Honolulu and The Lily River Oaks in Houston — on residential towers of 330 and 331 units respectively. Both confirmed from the developers' own releases. Whatever else the six markets have in common, one firm is already moving between them the way you are.

Four developers that will not hire an outside architect

This falls out of the same data and is the part we would want if the positions were reversed. These are developers whose design work is structurally unavailable — not because they said no, but because of how they are built.

DEVELOPER	PROJECTS	WHAT THE RECORD SHOWS
Creation Equity	6 — the most active developer in the set	LGE Design Build on all six : five as design-builder, one as contractor alongside GFF Design. No outside architect appears on any Creation Equity project
Ryan Companies US	4	Developer <i>and</i> general contractor on all four, and it brings its own architect — Butler Design Group on three, Deutsch on the fourth
Statesman Group	1 (565,729 sf, six buildings)	Developer and contractor both. No architect named at all
StreetLights Residential	The Langley, 134 units	Fully vertically integrated: StreetLights Creative Studio is architect and interior designer, SLR Construction is the general contractor. Every seat in-house

The Butler–Ryan pairing is worth isolating: it is the **only architect-to-contractor relationship that repeats more than once** anywhere in the 50. Three projects together. Everything else in Arizona is a one-off pairing, which is another way of saying the same thing as the first section — this market has very few locked relationships.

KOR Structural, prepared for MVE + Partners, 28 August 2026. Every figure is drawn from public municipal records or from the published statements of the parties named. Where something could only be sourced to secondary reporting it was left out rather than hedged. Happy to walk through any single number on a call.
