KOR STRUCTURAL · STANDARD DETAILS

FOR MONDAY WITH JIM

Where the cover sheets are

Nelson's master sheets are now in the catalogue: 57 general-notes and typical-detail sheets, in five collections, each with its drawing.

Sheets tab, S1.03 selected. Left: the sheets under their collection. Right: the sheet as Nelson's master prints it, and the 30 details on it.

1 Find a cover sheet

1. Open `KOR Operations` → `Standard Details`.
2. Click `Sheets` (top left, beside Details and Parts).
3. Pick a collection: **Concrete tower E, E1, D** or **Wood frame E1, D**.

2 Look at it

1. Click the sheet. Its drawing shows on the right.
2. Click the drawing to zoom, or `Open PDF` for the full sheet.

3 Go to a detail on it

1. Under the sheet's title: **Details on this sheet**.
2. Click one. The app opens it in `Details` with its own drawing.

4 Before the demo

1. This is the **new build**. The app installed on staff PCs today shows an empty Sheets tab.
2. Releasing the new build is your call.

MEASURED ON 30 OCT

- **57 of 57** sheets in the catalogue, one entry each; **688 of 688** entries have a drawing.
- **0 of 57** sheet drawings print another firm, another job or a placeholder (the office's term list). Printed with the clean title blocks.
- **57 of 57** sheets are full or flush right. 5 are part-filled; each sits as far right as its family's full sheets.
- Left out until Nelson places them: S4.02, S5.05, S6.01, Sx.x2.

ONE QUESTION FOR JIM

"Top to bottom, right to left": down columns, or along rows? Nelson's master does both: **39 of 57** sheets read in columns, **14** in rows (the shear-wall sheets among them). New sheets use columns until he says.
