

Business Development — Vancouver / Lower Mainland

Executive Summary — 19 June 2026

Purpose. Convert KOR's existing relationships into qualified-supplier positions and active pursuits across the Lower Mainland, Vancouver Island, the Interior, and the US West Coast, and open two new fronts: modular / off-site construction and underserved structural niches.

Strategic priorities

1. **Secure positions on qualified-supplier lists** that carry recurring public structural workload:
 - **K-12 Seismic Mitigation Program (SMP)** — access to roughly 400 government seismic-retrofit projects; requires EGBC Seismic Retrofit Guidelines certification (JM to complete; Ian to confirm timing).
 - **Fraser Health, BC Ferries, TransLink** — annual or continuous public workloads (marine qualification to be confirmed for BC Ferries and TransLink).
2. **Win public and design-build work as the architect's structural engineer.** On prime-team procurements KOR competes as the architect's structural sub; the priority is therefore to join the architect's team ahead of the RFP. Identify and target the key architects accordingly.
3. **Strengthen proposal leverage** — add an "additional services" appendix to Canadian proposals (crane footings, vault and core-hole review, seismic instrumentation, supplementary schedules) at pre-agreed fees, mirroring the US proposal format.

Priority pursuits

- **Lower Mainland** — Pinnacle International (Michael De Cotiis), Onni Group, Bosa Development and Bosa Properties, RBI Group, Graham Construction (Richmond Hospital Phases 2–3), PCI Developments, Axiom Builders, Squamish Nation / Nch'ka'y Development, M'akola Development Services, Mundi Hotel Enterprises.
- **Vancouver Island** — Emerge Modular with Evantra Developments (modular pipeline), Yellowridge Construction (Defence Canada design-build bid), Merrick Architecture, The Lark Group (Kirk Fisher), Farmer Construction.
- **Interior / Okanagan** — Orchard Park Properties (Apriano Meola), supporting the Mundi and RBI rental pipeline.
- **US / California** — Greystar and four further existing-relationship developers; a California qualified-leads report is in preparation.

Growth fronts

- **Modular / off-site construction** — the Emerge–Evantra pipeline and Yellowridge's Defence Canada design-build bid establish KOR in off-site delivery; the CMHC five-percent-down modular incentive is accelerating demand.
- **Underserved structural niches** — light industrial and light-civil infrastructure; tenant-improvement, steel-stud and suspended-ceiling add-on engineering (high-margin and repeatable); water features and pools; utilities and telecom.

Brand and marketing

- Establish a consistent LinkedIn and Instagram presence, resume developer and architect lunch-and-learns, and stand up a structured awards program.
- Website overhaul — work- and region-led rather than people-led — for decision at the Monday partnership meeting.

Deliverables

- CRM pursuits loaded and assigned to owners, locked to prevent duplicate outreach.
- A pursuit action sheet organised into focused packages with assigned leads, by Tuesday.
