

Pinnacle International — Developer Pursuit Dossier

Prepared for: Jim DesRoches, Principal, KOR Structural

Purpose: San Diego trip — June 29–July 1, 2026

Status: Priority target — live SD towers, no public SE on record

Prepared: 26 June 2026

1. Snapshot

Field	Detail
Type	Private luxury high-rise residential developer
HQ	Vancouver, BC (440 15th Street SD office for California entity)
Founded	~1980s; 40+ years operating
Owner/CEO	Michael De Cotiis
Scale	12,000–15,000 residences built; 51–200 employees; 10,000+ more planned
KOR Markets Active	Vancouver BC + San Diego CA (both live simultaneously)
Priority	HIGHEST — two live SD towers, both in KOR's SD backyard
Relationship Status	Cold — no prior KOR contact confirmed
California Legal Entity	Pinnacle International Development, Inc. — incorporated CA 2002, Licensed GC (#1056825, #818738), 440 15th Street, San Diego CA 92101

Why this matters in 60 seconds: Pinnacle is completing a 39-storey mixed-use tower in downtown SD right now and has a second 31-storey residential tower in preconstruction. They have been building in San Diego for 20 years using Glotman Simpson (Vancouver-based SE) as their structural engineer of record — the same Vancouver SE firm KOR competes with directly. No structural engineer is publicly listed on either current SD project. Pinnacle is the best-fit lead target for KOR's SD office because KOR already has 10 SD projects to reference and can offer an identical Vancouver-to-San Diego continuity story.

2. Business & Footprint

Pinnacle International is a family-controlled, owner-operated developer focused exclusively on luxury high-rise condominium residences, hotels, and master-planned mixed-use communities. Michael De Cotiis has run the company since founding. They do not flip or sell assets — they develop, manage, and sell units directly under the Pinnacle brand.

Product type: Cast-in-place concrete high-rises, 30–90 storeys. Hotels integrated into residential towers (Le Méridien San Diego is their first US hotel flag; Vancouver Marriott Pinnacle is their Vancouver hotel). Master-planned multi-tower campuses (Pinnacle Centre Toronto = 4 towers; Pinnacle Lougheed Burnaby = 5 towers planned).

Geographic presence:

- **Greater Vancouver / BC:** 25+ completed projects — Yaletown (939 Homer “The Pinnacle,” 1997), Coal Harbour (Venus, Classico, Ritz), Burnaby (Carrigan Court, Lougheed supertalls)
- **Greater Toronto Area:** Bellagio on Bloor, Pinnacle Centre (4-tower, 2,000 units waterfront community), Pinnacle on Adelaide
- **San Diego:** Four completed high-rises since 2005; two more in active pipeline

Company character: Tight-knit team (~100 people), high repeat with same consultants, long-term relationships are the norm. Pascal Yammine (VP Construction) is the day-to-day decision-maker for structural. Michael De Cotiis stays involved on major decisions.

3. Active Pipeline in KOR's Markets

San Diego (KOR's target market)

Project	Location	Scale	Stage	Architect	SE (public record)
Columbia & A (Le Méridien Pinnacle)	Columbia Core, downtown SD	39 storeys; 231 Le Méridien hotel rooms + 202 condos; ground retail; rooftop bar on 39th floor	Under construction — concrete pour documented March 2024; hotel opening Summer 2026	ACRM Architects (San Diego)	Not publicly listed
Pinnacle Pacific Heights	NE corner of downtown SD, near City College Trolley	31 storeys; 492 units (60 affordable); 2,250 SF retail	Preconstruction — building permit under review as of Jan 2026; no construction start	Unknown	Not publicly listed

Pacific Heights is the immediate opening. It is still in preconstruction with no confirmed structural engineer on record. The SE appointment window is open now.

Metro Vancouver / BC (relationship-building market)

Project	Location	Scale	Stage	Architect
Pinnacle Lougheed (Phase 1)	9850 Austin Road, Burnaby (Lougheed SkyTrain)	Two supertalls: 80 storeys (863 ft) + 73 storeys (782 ft); 1,466 strata units; 515,000 SF office; 171-room hotel; ~1.9M SF total	Final Burnaby Council approval September 2024; construction planning phase	JYOM Architecture
601 Beach Crescent	South end of Granville Bridge, Vancouver	67 storeys (650 ft); 480 condos + 206 hotel rooms + 152 social housing; ground retail	Rezoning application filed March 2026; public consultation not yet initiated	JYOM Architecture + GBL Architects

Lougheed supertalls will be the tallest buildings in Western Canada. Structural fee on Phase 1 alone will be enormous. This is a long-game relationship play — get on the radar in SD first, leverage the BC/SD story.

4. Who Decides Structural / Who to Know

Verified Contact List

Name	Role	Email	LinkedIn
Pascal Yammine	VP Construction	pyammine@pinnacleinternational.ca	linkedin.com/in/pascal-yammine-a6520751
Michael De Cotiis	Owner, President & CEO	md@pinnacleinternational.ca	—
John Moy	CFO / VP Finance	jmoy@pinnacleinternational.ca	—
Anson Kwok	VP Sales & Marketing	akwok@pinnacleinternational.ca	—

Approach Strategy

Start with Pascal Yammine. As VP Construction, he owns the structural and civil consultant relationships day-to-day. He manages a team of 3 direct reports (project managers) and interfaces directly with the SE on every active project. Michael De Cotiis is the ultimate decision-maker for major consultant appointments, but Pascal is the gatekeeper and advocate. Getting Pascal on your side gets you in the room with Michael.

Jim's opening: You are a structural principal from Vancouver — you've built concrete high-rises in BC and you have 10 delivered projects in San Diego. You are in SD this week. That's a unique combination. Lead with the SD-delivery credential (they know BC engineering firms

struggle to staff SD projects; KOR has a real SD track record). Then pivot to the Vancouver continuity angle for the Lougheed/601 Beach pipeline.

5. Competitive Reality — The Structural Incumbent

Glotman Simpson (Vancouver) is the established incumbent.

Glotman Simpson has been Pinnacle’s structural engineer of record for every confirmed San Diego project:

Pinnacle SD Project	Year	Role
Pinnacle Museum Tower (now Marina Tower)	2005	Structural engineer — seismic design per Rose Canyon Fault standards
Pinnacle on the Park / Island Tower 2 (15th & Island)	~2007–2010	Structural engineer — 45-storey, 484 units
11th + Broadway (twin towers, 31 + 32 storeys)	Completed ~2020	Structural engineer — 641,000 SF, 623 units (confirmed on Glotman Simpson’s own project portfolio)

Glotman Simpson is Vancouver-based — that is exactly why Pinnacle has used them. Same city as head office; same timezone; same code familiarity for a developer whose SD operations are run from a Vancouver leadership team. This is the model KOR is designed to replicate and surpass.

The opening: No structural engineer is publicly attached to Columbia & A or Pacific Heights in any permit record, design team listing, or developer communication found in this research. Glotman Simpson may well have the Columbia & A assignment already (under construction since ~2023), but Pacific Heights is still in preconstruction and the engagement window is real.

KOR’s displacement angle: Glotman Simpson is a larger generalist firm. KOR can offer the same Vancouver-to-SD continuity with deeper personal principal involvement (Jim himself on the file) and a higher-touch relationship. On a repeat developer with tightly managed projects, that matters.

6. KOR Angle & How to Win

Why KOR

- **Dual-market presence, proven.** KOR has 10 delivered projects in San Diego (800 Broadway, 6th & Olive, Simone at 1401 Union, Bayside, The Grande, and others) and 70+ in Greater Vancouver. Pinnacle is the only major developer operating simultaneously in both cities who does not already have KOR. That asymmetry is the pitch.
- **No listed SE on the live SD towers.** Pacific Heights is in preconstruction with no structural engineer on record. This is not a “we hope to displace someone” situation — it is an open seat.
- **High-rise concrete is KOR’s core.** Pinnacle builds concrete supertalls. KOR built One Burrard Place, The Mondrian, The Smithe, International Hotel & Tower in Vancouver. The product type is an exact match.
- **Same continuity story Glotman Simpson has sold, but KOR can offer it at principal level.** Jim DesRoches can be the named structural principal on the Pacific Heights file and on Lougheed. That is a credible differentiator over a 90-person firm.

Concrete Asks for Jim (San Diego Trip)

1. **Request a 20-minute intro with Pascal Yammine** while you are in San Diego. Reason: you are completing work nearby and want to introduce KOR. Don’t cold-call as a pitch — frame it as a peer introduction between professionals working in the same two cities. Reference your Vancouver practice and your SD projects. Ask about their SD pipeline timeline for Pacific Heights specifically.
2. **Bring one SD project reference sheet** (single page): pick the biggest/tallest SD project in KOR’s completed portfolio. A rendered photo, brief stats (storeys, units, concrete system type, completion year), and a client quote. Leave it with Pascal or email it following the meeting.
3. **If you get in front of Michael De Cotiis:** lead with Lougheed. He is personally invested in those supertalls — it will be the most significant structural engineering scope in Western Canada in a decade. Offering BC code expertise + SD continuity on one relationship is the reason to move from Glotman Simpson to KOR. Don’t undersell the supertall opportunity.
4. **Follow-up move after the trip:** Have someone in KOR’s Vancouver office search the Burnaby/Vancouver permit systems for the Lougheed structural permit application (it should file within 12–18 months of the September 2024 council approval). When it files

and names the SE of record, you know whether there is still a window on Lougheed or whether to focus exclusively on Pacific Heights and the 601 Beach rezoning.
