

What MVE runs, and how close it is to ours

Ken Yahampath, the operations stack he owns, and an honest read of where Mosaic overlaps the KOR suite — so nobody claims more than we can stand behind on a call with the person who built theirs. 26 August 2026.

Vantagepoint · Newforma · Mosaic · HubSpot

Overlap is one word, not one job

Three things not to say

× WHY THIS DOCUMENT EXISTS

Ken Yahampath is on Thursday's call and Dan Gura routed both technical questions to him. He runs MVE's operations stack and sits on the customer advisory council of one of its vendors. **He is the one person on the call who will know immediately whether a claim about operations software is real.**

This is the background for that conversation. **None of it belongs in the pipeline brief, and none of it goes to MVE.**

THE PERSON

Ken Yahampath

Business Operations Analyst / Resource Coordinator — the title differs by source; LinkedIn carries "Resource Coordinator/Statistician", Mosaic's own page calls him "Business Operations Analyst." kyahampath@mve-architects.com, 1900 Main Street, Irvine. At MVE **about a year**, so joined around mid-2025.

He is absent from MVE's public leadership page. That is why every commercial database reports MVE as having zero IT staff, and why an earlier draft of the pipeline brief wrongly said they have no technology function. ⚠️ **They do. He is it.** Never say or imply otherwise.

▲ IN HIS OWN WORDS

*"I have been working at MVE + Partners for a little over a year and have been working with MOSAIC for that entire duration. I work largely with **ERP** and our leadership team to formulate optimal work plans for **maximum utilization and accountability**. I also work with most of the other company data to **report on and strategize to increase efficiencies** across the board."*

Source: his member page on Mosaic's customer advisory council, read 26 August 2026.

Read that against Ian's own job. Both take an ERP that will not answer questions directly, sit next to leadership, and turn firm data into decisions. That is a peer conversation, not a vendor one — and it is the most productive footing available on Thursday.

THE STACK

What MVE actually runs

SYSTEM	WHAT IT DOES FOR THEM	HOW WE KNOW
Deltek Vantagepoint	The ERP — accounting, projects, the ledger. Same product family KOR runs.	Confirmed by Dan Gura in writing , 19 Aug email thread
Newforma	Project information management — email filing, transmittals, document control.	Confirmed by Dan Gura in writing , same reply
Mosaic	Resource and capacity planning, sitting on top of the ERP. See below.	Yahampath's own bio; Mosaic's customer council page
HubSpot	CRM — roughly 800 contacts and 600 companies, which Yahampath manages.	His LinkedIn; corroborated in MVE's technology profile
Revit, Navisworks, BIM 360, Rhino, SketchUp	Design and delivery. They are a Revit shop.	Firmographic technology profile, 26 Aug

⚠ **Unknown, and worth asking rather than assuming:** whether timesheets live in Vantagepoint or in Mosaic — Mosaic sells its own time tracking, and firms run it either way. Dan's reply also left *"any other third-party integrations?"* for Ken to answer, so there may be more.

THE PRODUCT

Mosaic, in depth

A resource and capacity-planning SaaS built for architecture and engineering firms. **Not an ERP and not a project-management tool** — deliberately narrow. It sits on top of the finance system and integrates with **Deltek, Unanet, BST Global and QuickBooks**.

Pricing is quote-only behind a demo request; no public figure.

What it sells, by its own feature list: project portfolio management, time tracking and timesheets, project and resource planning, project time-budget tracking, workload / utilization / budget / variance reports, hiring and forecasting reports, and custom project data fields.

What it actually does, in its own words:

- **Backlog in real time** — *“monitor your backlog in real-time, so you know whether you can take on more, have enough, or are overloaded and need to hire — including what role and when.”*
- **Hiring by role and date** — *“Stop guessing when it’s time to hire. Mosaic’s AI forecasts workload and analyzes role demand so you know exactly when to hire.”*
- **Utilization without burnout** — who is over- and under-loaded, across teams, roles and offices.
- **Plan versus actual** — *“compares project plans against actuals to improve the accuracy of your estimated project hours, budgets, and schedules.”*
- **Scenario modelling** — test hiring, pipeline and delivery scenarios before committing.

► HOW MOSAIC POSITIONS ITSELF AGAINST THE ERP — THEIR WORDS, NOT OURS

“Your ERP tells you the past. Mosaic helps you manage the future... ERPs are built for finance, not planning people. Resource management is just one small module — and it shows... ERPs were designed for the finance close, not the Monday-morning plan.” They call themselves *“the operational planning layer your ERP was never built to be.”*

Which is why the “native Deltek reporting is painful” line in the 19 August email was safe. MVE’s chosen vendor makes the same argument far harder, and MVE agreed with it enough to buy. Dan did not defend Deltek in his reply — he routed the question to Ken.

THE INFERENCE

What buying Mosaic reveals about MVE

Nobody buys a narrow capacity tool when capacity planning is working.

Mosaic is narrow, and what it is narrow *about* is the diagnosis. MVE bought it **and hired someone to run it**, which means they were not confident about four things: **how much work is genuinely committed, who is over and under loaded, which roles to add and when, and how plans compare to actuals.**

They have instrumented their busyness. That is better corroboration of Dan's "we're busy" than any published billings figure, and it means Ken can answer "*where do you get tight, and in which roles?*" precisely — because it is literally his tool's output.

▲ THE COMMERCIAL CONSEQUENCE – THE MOST USEFUL LINE IN THIS DOCUMENT

When Jim says "*we have resources available to help you,*" MVE's internal answer is decided by Mosaic, which forecasts role demand by date and names the role to hire.

So the offer competes with a hire, not with another engineer.

Pitch it as **flex capacity that absorbs a peak without adding headcount** — that lands against a gap their own system is already showing them, and it is the one thing a hire cannot do quickly. It generalises: any firm running resource-planning software is making a buy-versus-hire decision, not a buy-versus-buy one.

THE HONEST COMPARISON

Mosaic against the KOR suite

They overlap on a word, not on a job. Both say "utilization" and mean opposite tenses.

CAPABILITY	MOSAIC	KOR SUITE	READ
Utilization	Planned forward — allocation across people and roles	Measured — UtilizationService reads posted timesheets, billable ÷ available, plus a trailing-12-week per-person load table	⚠ Same word, opposite tense. Ours is live and real; theirs is forward.
Forward staffing / who works on what next	Core product	Not built. Nearest is the bi-weekly Workload Meeting board (P1–P5, per-project notes) and PM Capacity & Risk	❌ Do not claim parity. Ours is the human process theirs automates.
Hiring forecast by role and date	Core product	Not built	❌ Do not claim.
Scenario modelling	Yes	Not built. Revenue Forecast is Theil-Sen on a financial series, not a staffing model	❌ Do not claim.
Backlog	Forward, in work-hours	BacklogService — financial: fee less billed, incl. T&M	Different unit. Both real.
Financial depth	None. Reads from the ERP	WIP, AR with aging and DSO, collections cases, GL P&L, billed P&L, partner books with per-year FX, client portfolio	★ Not close. This is ours.
Portfolio history	Project templates, plan-vs-actual	9,904 projects re-sliced seven ways; per-employee scoring with quarterly grade history	★ Ours is deeper.
Business development	Nothing	The BD brain — tender sources, competitor and client dossiers, pursuit lifecycle	★ Entirely outside their scope.
Engineering tooling	Nothing	DXF→ETABS, Revit tooling, standards	★ Different universe.
Conversational AI over the data	An AI assistant inside the product	MCP tools over the same services — <code>get_ar</code> , <code>get_utilization</code> , <code>get_backlog</code> , <code>get_billed_pnl</code> , <code>get_firm_health</code> and others	Comparable in kind; ours spans more ground.

The fair summary: Mosaic is a deep, narrow tool for one job KOR has not built — planning people forward. The KOR suite is broad across finance, portfolio analytics, BD

and engineering, where Mosaic does nothing at all. **The honest line, if it comes up: “we measure utilization, we don’t plan it forward — that is what you bought Mosaic for.”** Saying that costs nothing and buys credibility with the one person who would know.

RESTRAINT

Three things not to say about our own suite

From KOR’s own August audit of the Financials module, whose demo-risk ranking exists for exactly this reason. None of it bites on Thursday because the agreed position is verbal with no screens — but Ken is precisely the person who asks “*as of when?*”

× THE THREE

- **Do not say “real-time.”** Most headline figures are **as of February 2026** — WIP, cash, backlog, P&L, revenue trends. Only **AR, utilization and firm health** are genuinely current. If numbers come up, lead with those three.
- **Do not quote a WIP figure.** With Revenue Generation off, both branches draw from 238 residual rows — 0.5% of the table. The tile is already hidden. The audit’s own answer is the strong one: “*Deltek isn’t running revenue recognition, so we don’t publish a WIP number we can’t stand behind.*” That reads as rigour, not as a gap.
- **Do not invite a live P&L comparison.** The AI returns a different P&L than the screen does, and two different FX rates sit in one window.

△ One more, relevant only if anything is ever shown: **the Financials access gate fails open when the AD lookup fails**, which force-shows Financials *and Compensation* — salary data. It is another reason the no-screens position is right.

ON THE CALL

How to handle it

- **Ask, don’t assert.** “*What did you end up putting around Vantagepoint to get the reporting you needed?*” He will tell you about Mosaic, and you will be agreeing with him rather than about him.
- **Then the useful one.** “*Where does your resource picture get tight over the next couple of quarters — which roles?*” Easy for him, precise for us, and it opens the door for “*we have resources available.*”
- **Never characterise Mosaic or his setup.** He has spent a year building it and sits on the vendor’s advisory council. Criticising either reads as criticising his work.

- **Keep the Deltek point where it already is** — on *native reporting*, which is what was actually written, and which his own vendor argues harder.
- **Concede the gap deliberately.** Admitting KOR does not plan staffing forward is cheap, true, and makes everything else more believable.

KOR Structural — MVE operations-stack intelligence. 26 August 2026. Internal; **not for distribution to MVE.**
Companion to the MVE intelligence brief and the Thursday call-prep sheet.
