

What CoStar gives Dan, what it cannot, and what we can

Dan Gura runs CoStar across the entire United States and calls his own workflow “antiquated.” Before claiming to beat it, this characterises it — then shows the one column it structurally does not carry, with Arizona worked end to end as proof. 27 August 2026.

CoStar avg \$15,130/yr

50 AZ projects, 49 design teams

The design team is not a CoStar entity

GROUND TRUTH

What CoStar actually is, and what it costs

CoStar Suite is a commercial-property research and prospecting database covering the US, Canada, UK and France — over **300,000 active users** and forty years of history. It is the reference tool for brokers, lenders, appraisers and investment teams. Dan has it **for the entire United States**, got it as a condition of joining MVE thirteen years ago, and his BD staff use it under him.

FIGURE	VALUE	SOURCE
Average annual contract	\$15,130	Vendr internal transaction data
Observed range	~\$3,000 to ~\$23,000 / yr	Vendr, across their buyer base
Entry point	from ~\$300 / month	Published guides
Pricing model	Custom and opaque. It does not reduce to a per-seat number — the quote is driven by which markets you take, which modules, and how many users. National coverage sits at the top of the range.	

✗ DO NOT CONFLATE TWO DIFFERENT PRODUCTS

CoStar Real Estate Manager is a separate lease-administration and accounting product, quoted at **\$75,000–\$200,000/yr** mid-market and **\$200,000–\$500,000+** enterprise. That is *not* what Dan is describing. Quoting those numbers at him would be wrong and he would know immediately.

How CoStar models a project. Its development pipeline runs four phases — **Unconfirmed → Planning → Final Planning → In Construction** — tracked by construction status, expected delivery date and unit or room counts, sliceable by class, market, submarket and brand. CoStar research staff do talk to architects, developers and planning departments, but they do so *to firm up delivery dates*. That distinction is the whole opportunity.

THE GAP

The design team is not a CoStar entity

CoStar’s unit of analysis is the *asset* and its economics. Ours is the *project team*.

Everything CoStar is built to return describes a building and its money: who owns it, who leases it, what it sold for, what it will rent for, when it delivers. That is the correct design for its customers — brokers, lenders, appraisers, investors. **None of them need to know who the architect is.**

So the fields that matter to a firm trying to get *hired onto* a project — architect, structural engineer, civil, landscape, general contractor, and above all **whether a seat has been filled yet** — are not what CoStar indexes. Dan can tell you a 400-unit project in Tucson was submitted and who the developer is. He cannot filter for “*projects where no architect has been appointed*.”

▲ WHICH IS THE PITCH, AND IT IS NOT A SOFTWARE PITCH

Dan does not need better developer contacts — that is where CoStar is strongest and where he is already good. **What he cannot buy is the consultant layer:** who is already on a project, who is not, and which developers habitually use which architects. For a BD director at an architecture firm that is a displacement map, and for KOR the same data with the structural row is a target list.

METHOD

Where the design-team data actually lives

It is published — just not by CoStar, and not in one place. It sits in regional construction trade press and in planning submittals, and it has to be assembled region by region. The sources that carry full consultant rosters:

REGION	SOURCE THAT NAMES THE DESIGN TEAM	WHAT IT YIELDS
Arizona	AZBEX (Arizona Builder's Exchange) — ▲ subscription ; and AZ Big Media , which is open	★ The richest of the set. AZBEX names developer, architect, landscape architect, civil engineer, traffic engineer and land-use counsel on a single case. But the archive is gated — see below
Nevada	NVBEX — same publisher as AZBEX, same gate	Same format, same depth. The two are siblings, which matters commercially
Texas	Houston Chronicle <i>residential development tracker</i> ; Houston.org project round-ups	Developer, size, stage, timeline; architect intermittently
Florida / N. Carolina	Multi-Housing News, Multifamily Dive, local business journals	Developer and program reliably; design team on the larger towers
Hawaii	★ HCDA Executive Director's monthly report (Kaka'ako) — the regulator's own PDF, plus its Planned Development permit staff reports	★ Names what is <i>under construction</i> each month, and the staff reports name the applicant. It is the workaround for Honolulu's permit feed, which has been frozen since 1 July 2025
California	LA YIMBY, SF YIMBY, BuildSD, city plan sets	Already proven — the plan set carries the full directory
Anywhere	The city entitlement plan set itself	★ Definitive. The project-directory sheet lists every consultant. Slow, but it is the ground truth

▲ THE BUY RECOMMENDATION — BEX, NOT ANOTHER SCRAPER

AZBEX is subscription-gated, and testing established that its free pages are stubs. Ten current August 2026 articles were pulled; two carried an architect in the teaser and the rest returned a sign-up form where the body should be. **So every “no architect named” from AZBEX is paywall truncation, not absence** — and reporting it as absence would be the same error three times over.

The right response is not a better scraper. **The same publisher (BEX) covers Arizona and Nevada** — AZBEX, NVBEX, and **DATABEX**, a project database covering every Arizona commercial and infrastructure job over \$5M. Two of Dan's six regions from one subscription, with the design team attached. **Pricing is quote-only** — bex@azbex.com, 480-709-4190, and they advertise bundle pricing across the three products. Worth a call before another week of research.

▲ **Arizona has no equivalent of San Diego's permit feed.** San Diego republishes its full development-approvals table daily — 834,000 rows with status, valuation, storeys and unit mix. Phoenix publishes *aggregate counts only*: 23 rows of yearly permit totals. Its proposed-zoning layer gives case numbers and acreage but **no project name, developer or unit count**. So Arizona cannot be extracted; it has to be researched. Worth knowing before promising a live feed.

Arizona — 50 projects, 49 design teams

Assembled from AZ Big Media’s 2026 projects feature and cross-checked against AZBEX. **Fifty current Arizona projects with developer, general contractor and architect named on forty-nine of them.** This is the artefact CoStar cannot produce.

The Arizona architect league table — who is actually winning work, by project count in this set. Counts were recomputed from the source’s own Architect: fields and reconcile against its label count exactly; “Type” describes how the firm appears *in this set*, not an audited national footprint:

ARCHITECT	PROJECTS	TYPE
Butler Design Group	6	Design-build
LGE Design Build	6	Design-build
RSP Architects	4	Hospitality, civic
triARC architecture & design	3	Arizona
Gensler	3	National
STG Design	3	Arizona
Phoenix Design One	2	Arizona
ALINE Architecture Concepts	2	Arizona
Deutsch Architecture Group	2	Arizona
Soaring Eight	2	Arizona
Corgan	2	National
DLR Group	2	National
KTGY	1	★ National multifamily
Niles Bolton Associates	1	★ National multifamily
ESG Architecture & Design	1	★ Multifamily

Also present once each: Dig Studio, Devenney Group, Lamar Johnson Collaborative, Richard Kennedy Architects, Todd & Associates, McCarthy Nordburg, Hamilton Architecture, Grace Design Studios, Ajanta Design, GFF Design and Athena Studio. Twenty-six firms hold 51 architect slots across the 49 projects that name one — two projects name two firms each.

✗ THE OBVIOUS READING OF THIS TABLE IS WRONG

The two six-project firms look like the competitive pressure. Neither is. **Butler Design Group is not a design-build firm at all** — six projects, six *different* contractors (Stevens-Leinweber, Ryan ×3, Willmeng, Layton). And by sector it is four industrial, one healthcare, one civic: **zero multifamily**. LGE genuinely is design-build, and five of its six are industrial.

Design-build takes 50% of Arizona industrial in this set and 8% of multifamily — one project in twelve — and 0% of civic, healthcare and hospitality. The threat is real and it is not in MVE’s sector.

Read that as a BD director would. Only **12 of the 50 are multifamily**, and those twelve went to **eleven different architects** — Gensler has two and nobody has three. **Arizona multifamily has no incumbent.** KTGY, Niles Bolton and ESG each hold exactly one: the national multifamily names are present in Arizona and have not taken it.

★ **Four developers are structurally closed and should not absorb BD time:** *Creation Equity* (6 projects, the most active in the set, LGE on all six, no outside architect ever) · *Ryan Companies US* (developer and GC on all four, brings Butler on three) · *Statesman Group* (developer and GC, no architect named) · and in Houston, *StreetLights Residential* (architect, interiors and GC all in-house). The **Butler–Ryan pairing is the only architect-to-contractor relationship that repeats** anywhere in the fifty.

Representative entries, in the format the data actually supports:

PROJECT	SIZE	DEVELOPER	ARCHITECT	CONTRACTOR
5550 E. Crown Place, Phoenix	160,000 sf, 240 keys	LaPour / Holualoa Companies JV	RSP Architects	Whiting-Turner
19360 N. 73rd St., Scottsdale	88 units, 1,570– 3,015 sf each	Belgravia Group	KTGY	Maris Construction of Arizona
217 E. 7th St., Tempe	521,553 sf	AZ Tempe Holdings / Trinitas	Niles Bolton Associates, Gensler	Layton Construction
10050 N. Scottsdale Rd.	384,492 sf	High Street Residential	ESG Architecture & Design	Wespac Residential
95 Arroyo Pinon Dr., Sedona	43,100 sf, 89 keys	Crystal Creek Capital	RSP Architects	Chanen Construction

⚠ **Honest caveat on this set:** it skews industrial, office and hospitality rather than multifamily — it is a general CRE round-up, not a housing list. As a *competitive map of who designs what in Arizona* it is strong. As a multifamily lead list it is thin, and building that properly means going to AZBEX case by case.

The wider Arizona pipeline, from the same research: **Arro** (Empire Group / Aspirant — ~1.8M sf, twin towers at 541 ft and 425 ft, the future tallest in the state, 380 apartments plus 275 co-living, 250-key hotel); **The Whitney** (24 storeys, 328 units, Central & McDowell); **Revelry** in Tempe (Aspirant, two towers, 533 units); **Astria Tempe** (27 storeys, 380 units); and a **323-unit Dominion** scheme in Tolleson still needing its rezoning.

DAN'S OTHER REGIONS

Nevada, Texas, Carolina, Hawaii, Florida — state of play

Dan named live or near-live MVE work in **Arizona, Nevada, Hawaii, Houston, Charlotte and Miami**. What is established so far, and what is not:

REGION	WHAT WE HAVE	DEPTH
Nevada	Bally's Las Vegas — three-phase mixed-use on the former Tropicana site, 26 acres, architect Marnell Howryla Architecture, ~3,000 rooms, 2,500-seat theatre, 500k sf retail. 🚫 Structural is taken: Thornton Tomasetti, confirmed on their own project page, and they hold the A's ballpark on the same site. Riviera site — Brett Torino / BPS Partners with Paul Kanavos of Flag Luxury, 26 acres bought from the LVCVA for \$125M; 600-ft towers, 750-key hotel, 425 condos, 3,310-seat domed venue. No architect or engineer named anywhere. Hylo Park — old Texas Station / Fiesta Rancho site, architect SCA Design (Sheldon Colen), confirmed on their own site; ⚠️ they describe 393 single-family homes plus a lifestyle centre while trade press reports 700 units on 73 acres, and they do not name the developer that trade press gives as Agora Realty. KB Home's Sandstone, 1,500 homes on 200 acres in North Las Vegas — ⚠️ production housing, not a consulting commission. ★ Silverado — 13.5 acres south of the Strip, developer Ochoa Development, architects Gensler + Yihong Liu & Associates, civil RCI Engineering; no structural engineer publicly named, and Clark County Zoning hears it 2 September 2026	Good start. NVBEX is the source to work through for design teams
Texas / Houston	Upper Kirby / The Lily River Oaks — Southern Land Co., 953,000 sf over two towers (38-storey, 331 units incl. 18 penthouses, plus a 10-storey 107,000 sf office). Architect and interiors Solomon Cordwell Buenz, civil Kimley-Horn, GC ANDRES Construction. 🚫 Structural taken: DeSimone Consulting Engineering — named verbatim in the developer's own groundbreaking release. \$166M construction loan Aug 2026, completion 2028. The Langley, 1717 Bissonnet — StreetLights Residential + Hunt Real Estate, 20 storeys, 134 units, completed 2026	🚫 StreetLights is a closed shop — StreetLights Creative Studio is architect <i>and</i> interior designer, SLR Construction is the GC. Both in-house. ⚠️ Note SCB appears here <i>and</i> on Kalae in Honolulu — the same competitor architect in two of Dan's regions
Texas / Dallas	Lucille, 2700 McKinney Ave, Uptown — Endeavor Real Estate, 22 storeys, 265 units on 1.14 acres. Architect HKS, civil Kimley-Horn, MEP Blum Consulting Engineers, GC Rogers-O'Brien. 🚫 Structural taken: BDD. Financing secured Jul 2026, move-ins late 2028	★★ This is the region to ask Dan about. MVE advertised a Project Lead and a Job Captain as "Remote — Dallas, Texas" on 21 Aug 2026 and has no Texas office. Nothing about a Dallas project appears in any public source. The job posting is the only signal that exists
Florida / Miami	PMG is the name to watch, with two supertalls. Waldorf Astoria, 300 Biscayne — 100 storeys, 1,046 ft, 205 keys and 360 residences (GRAEF's own figures; trade press says 1,049 ft / 387). Architects Sieger Suarez + Carlos Ott; civil and CEI GRAEF. Structural reported as CHM Structural Engineers ⚠️ <i>secondary sources only</i> — <i>not confirmed on CHM's own site</i>. Tops out late 2026. Delano Residences — 90 storeys, Carlos Ott with CUBE3 as architect of record, interiors Meyer Davis	★ No structural engineer is publicly named on Delano. ⚠️ GRAEF is <i>civil</i>, not structural — their own page says "site/civil engineering services", and reading it as structural would have been the same error as TSK on the Convention Center
N. Carolina / Charlotte	Queensbridge Collective, 1111 S. Tryon — Riverside Investment & Development + Woodfield + PGIM Real Estate, two towers, 755 residential units total (409 + 346) plus 356,000 sf Class A+ office and 20,000 sf retail, ~\$725M. Architect Goettsch Partners, GC Clark Construction. Centre South — The Fallon Company, 329 apartments, ground broken early 2026	★ No structural engineer named on the developer's own project page. ⚠️ A secondary source put MKA on it as a "consultant"; MKA's own site does not carry the project, so treat that as unverified. ⚠️ Clark's project page returns 403 — blocked, which is not the same as absent

REGION	WHAT WE HAVE	DEPTH
N. Carolina / Raleigh	Raleigh is the live one, and it is queryable. The Wake County permit feed returned 2026 projects with owner and contractor attached: Omni Hotel Raleigh \$308.2M (Brasfield & Gorrie), Block 4 Midrise \$69.6M — Kane Realty's <i>Tributary</i> at North Hills, owning entity Tributary SPV LLC, GC John Moriarty & Associates — 5000 Louisburg Rd \$77.8M (Halle Building Group), West South Street Apartments \$47.3M (W.M. Jordan)	⚠️ Charlotte is the weak half. Its entitlement feed is the richest schema anywhere and is frozen at 23 May 2022; only a rezoning index is live. 🚫 These feeds carry owner and contractor but never an architect or engineer — the design team still has to come from elsewhere
Hawaii	Three towers under construction in Kaka'ako, per the HCDA Executive Director's report of 1 July 2026. Kalae — Howard Hughes / Victoria Ward Ltd, architect Solomon Cordwell Buenz, GC Layton Construction, landscape Vita, interiors Nicole Hollis; 330 homes at Ward Ave & Ala Moana. Ālia — Kobayashi Group, architect WRNS Studio, interiors The Vanguard Theory; 457 units, 39 storeys over a 5-storey podium, 1,075,981 sf, ~\$400M, completion 2027. Launiu — Howard Hughes, architect Arquitectonica (their first Hawaii project), 486 homes, 40 storeys, broke ground 21 Oct 2025. The Park Ward Village dropped off the under-construction list between the May and July reports — i.e. it completed	★ Structural is not publicly named on any of the three. Verified against the developer's own project-team page, the architect's own page and the groundbreaking release — not one lists a structural engineer. Ālia sits under Kamehameha Schools' Kaia'ulu 'o Kaka'ako master plan, so more towers follow the same landowner

Stated plainly: every one of the six regions Dan named now has named projects with named design teams, and every count in Arizona has been recomputed from source. Anything sent to Dan should also say what is *missing* — he will check, and being caught claiming coverage we do not have would undo the credibility the dossiers just earned.

▲ WHERE THE STRUCTURAL SEAT ACTUALLY STANDS, ACROSS ALL SIX

Taken, and by whom: Thornton Tomasetti on both Las Vegas megaprojects · DeSimone on Southern Land's Houston towers · BDD on Lucille in Dallas · MKA on the Las Vegas Convention Center (complete since 2021).

Not publicly named: all three Kaka'ako towers · Delano Residences in Miami · Queensbridge Collective in Charlotte · Tributary in Raleigh · Silverado and the Riviera site in Clark County. **That phrase means no public record names one. It is a reason to ask, never a reason to assert.**

Unverified and marked as such: CHM on the Waldorf Astoria (secondary sources only) and MKA on Queensbridge (a single thin source its own site does not support).

RECOMMENDATION

What to send, and what to claim

- **Lead with the corrections, not the volume.** Dan told us Santa Clara Park is AO's and that our headcount figure was modelled. Sending those back fixed proves the "it learns and it is never wrong again" claim better than any new document. It costs nothing and it is the most credible thing we can do this week.
- **Send Arizona as a *sample*, framed as the design-team layer.** Fifty projects with forty-nine design teams, plus the architect league table. Say what it is: assembled from public trade sources, not a live feed, and skewed to commercial rather than multifamily.
- **Say the honest thing about his 40-storey test.** A filing made that same day is not in any public feed yet; it surfaces when the city posts it or the trade press picks it up, typically within days. **The defensible claim is that nothing published gets missed — not that nothing unpublished is known.** He is a professional; the honest answer will land better than a dodge.

- **Do not offer a CoStar replacement.** He pays for national coverage and forty years of comps. What we have is a different axis, not a cheaper version of his. The line is *“this is the layer your CoStar does not carry”* — and on that ground we are genuinely ahead.

KOR Structural — internal BD intelligence, 27 August 2026. **Not for external distribution in this form.** The Arizona section is the part fit to be adapted and sent.
