The platform

The tools being built so a firm of about sixty runs **like a Fortune 500 company** in business development, financials, operations and IT. The system watches, prepares and drafts; people decide and act.

WHY BUILD IT

Big-company discipline without big-company overhead

A Fortune 500 company runs on market intelligence, a managed pipeline, a finance office that watches cash daily, operations reviews, and IT that is monitored rather than repaired. KOR cannot hire those departments. It can build the tools that do most of their work, on its own data, and put the result in front of the person who has to act.

WATCH
Every source, every night: tenders, permits, Deltek, the CRM, every PC and server.

PREPARE
Ranked, with the evidence and KOR's own record behind each item.

DRAFT
The email, the agenda, the roll-up, ready to send.

DECIDE
A person reads it and acts. Nothing goes out on its own.

WHAT EXISTS · WHAT IT HAS FOUND · WHAT IS NEXT

Four pillars

BD Business development apps

F500 HAS	A CRM, market intelligence, a bid desk, win/loss review.
KOR HAS	The BD Director (your daily hour, drafts, meetings); the early-signal radar on 128 sources; the CRM with stages and weekly owner roll-ups; client dossiers; a knowledge library of 44,446 findings from BD books and KOR's own documents.
FOUND	1,731 new signals in 30 days. KOR's real win/loss record, rebuilt from 4,785 past pursuits: 72% when a client decides, 43% of everything sent.
NEXT	The app in the leads' hands (pilot: Omar, Islam, Jim); open fees into the CRM; tender questions and addenda.

$ Financials

F500 HAS	A finance office: daily cash, receivables, backlog, project margins, a monthly close.
KOR HAS	The Financials module and Executive Summary across all 814 active projects (cash, AR aging, backlog, over-budget, delivery risk, utilization); the impact scoreboard, recorded every morning since 18 October.
FOUND	$805k owed on projects no longer active, $502k of it on one job last invoiced in February 2024. Invoicing down a quarter in six months. Each 30 days off collection time is about $423k of cash.
NEXT	Collections: the module is barely built, so chasing is by hand. The monthly scoreboard page.

OPS Operations

F500 HAS	Operations reviews, resource planning, project controls, a standard way of working.
KOR HAS	The COO brief in your daily hour; PM workload and timesheet completeness; over-budget and billing-lag lists; project tools for the engineers (email filing, transmittals, standard details, drawing-to-model tools).
FOUND	272 of 814 active projects over their hours budget, 72 critical, 94 billing slower than they burn hours.
NEXT	Extra-service letters tracked as a step; the COO monthly from 29 October.

IT IT

F500 HAS	Monitoring on every device, patching on schedule, a service desk, backups that are tested.
KOR HAS	NetworkOps, KOR's own fleet control: health of every PC and server, rack, UPS and firewall monitoring, updates, remote fixes, and the IT moves in your daily hour.
FOUND	84 open issue groups today, 6 critical (failing or missing drives); 35 machines missing October's security patches (16 October).
NEXT	Patch the 35; the backup path and server reboots already planned; retire any paid tool the platform now replaces.

THE COST LINE

Because of NetworkOps, KOR's own monitoring, patching and remote-support platform, outside IT spend comes down to five things: **antivirus, Veeam backups, Office 365, connectivity and phones.** Everything else (fleet monitoring and remote support, the CRM, market intelligence, financial reporting, the daily brief) is built and owned by KOR, so it costs no licence fees and fits how KOR works.

FROM THE SYSTEM TO A PERSON

How it reaches people

- **You:** the daily hour at 6:05, by email and in the Director, with BD, COO and IT moves ranked and drafted (Part 3).
- **Pursuit owners:** the weekly roll-up you forward, then the app itself once the pilot starts.
- **JM and Jim:** the COO monthly pre-read and their quickie, built from the Financials engine.
- **Everyone, later:** nothing reaches the team directly until you decide it should. Today every draft opens unsent in your Outlook.

THE RULE THE PLATFORM KEEPS

Each number is read from the source system (Deltek, the CRM, the fleet), never retyped, and shown with where it came from. Judgement is written in a working session and recorded, so the reasoning behind a recommendation can be checked.

Sources: knowledge library and CRM counts read 18–19 October 2026; docs/KOR-Management-Win-Loss-2026-10-18.md; the morning brief of 19 October (Financials engine, NetworkOps open findings); NetworkOps patch status of 16 October.
