

Thursday, 10 AM

Teams call. Dan Gura and Ken Yahampath, Matt McLarand copied. Jim, Islam and Ian from KOR. This is the prep sheet — the detail sits in the intelligence brief.

+7.4% in 6 months

8 roles open

0 in San Diego

THE OBJECTIVE, IN JIM'S WORDS

▲ WHAT THIS CALL IS

"Remind them we're still in business, that you need to put us on your list. Find out what they've got coming up that we can help with — let's get on that list and we'll send you a proposal."

Everything below serves that. The pipeline pages exist so that when Dan says "we've got a few things coming", you already know what they are and can be specific back.

⊖ WHAT THIS CALL IS NOT

- **Not a software pitch.** The AI tooling is bait — "the only reason I brought it up was to spark interest, and he bit right away." Talk about it **verbally**, show nothing, and set the hook for a follow-up call.
- **No code, no screens, no leave-behind.** Agreed at the prep call.
- **Do not raise the virtual-engineer / virtual-drafter work.** Agreed: it isn't working right now.
- **This document does not go to MVE.** It is a hunting sheet and reads like one.

WHO IS ACTUALLY ON THE CALL

Dan Gura — Director of Business Development, Irvine

The primary, and he organised it. Jim's read: "a seasoned BD power user — your counterpart." He moved the call to Thursday himself. o 949.809.3354.

Ken Yahampath — Business Operations Analyst / Resource Coordinator

The new name, and the one worth preparing for. On the To line; Dan routed both technical questions to him. See the card below.

Matthew McLarand — President + Director of Design

Copied only — may or may not join. Founder's son, runs the firm, and Jim has the relationship. Δ He will not decide alone.

KOR: Jim, Islam, Ian

Islam gives the call engineering depth beyond BD chat. Omar likely can't make 10 AM.

KEN YAHAMPATH — WHO HE IS

Your counterpart, and the man who knows how busy MVE really is.

At MVE about a year. In his own words: *"I work largely with **ERP** and our leadership team to formulate optimal work plans for **maximum utilization and accountability**. I also work with most of the other company data to report on and strategize to increase efficiencies."*

He runs **Deltek Vantagepoint** (the ERP), **Mosaic** and a **HubSpot CRM** of ~800 contacts. He is **not** on MVE's public leadership page, which is why earlier drafts wrongly said MVE has no internal technology function. **They do. He is it.**

Mosaic is a separate company from Deltek — a third-party resource and capacity-planning tool that sits *on top* of the ERP and integrates with it. Its own marketing pages are titled "Mosaic vs. ERPs." Ken is on Mosaic's **Product Advisory Council** — a customer panel that shapes their roadmap. **Not a board of directors, and nothing to do with Deltek.**

WHAT BUYING MOSAIC TELLS YOU

Nobody buys a capacity tool when capacity planning is working.

Mosaic is narrow, and what it is narrow about is the diagnosis. Its own headlines: *"Do you know how much work you have?"* and *"monitor your backlog in real time, so you know whether you can take on more... or are overloaded and need to hire — including **what role and when**."* MVE bought and staffed an answer to that. **They have instrumented their busyness** — which corroborates Dan's "we're busy" better than any published number.

★ **The consequence: our offer competes with a hire, not with another engineer.** Mosaic tells them which role to add and when. So pitch **flex capacity that absorbs a peak without adding headcount** — it lands against a gap their own system is already showing them, and Ken is the one reading that screen.

▲ THE DELTEK REMARK IS COMMON GROUND, NOT A GAFFE

You told Dan native Deltek reporting and data mining is painful. MVE agrees — with budget and with headcount.

They **bought Mosaic** because the ERP alone didn't give them the planning view, and they **hired Ken** to get insight out of the ERP and the rest of their data. That is the same conclusion you reached, solved two ways. And the tell is in the thread: you wrote it on 19 August and **Dan didn't defend Deltek — he routed the question to Ken.**

⚠ **Keep it on native reporting, which is what you actually said.** Ken has spent a year making Deltek-and-Mosaic work and sits on Mosaic's advisory council — do not characterise either product. Better: ask *"what did you end up putting around Vantagepoint to get the reporting you needed?"* and agree with the answer.

▲ THE STRONGEST OPENING — ONNI

Dan asked Jim about Onni, and MVE appears to have landed an Onni job.

⚠ **Confirm the name first** — it reached us as "Ani" in a call transcript, and Onni is the reading that fits. If it holds, this is the warmest thing on the table: **KOR already works for Onni**, and MVE's **5350 Wilshire** for Onni — 419 units, 46 storeys, Mid-Wilshire — had its **Draft EIR published on 30 July**, four weeks ago, with **no structural engineer on public record.**

One shared client, one live tower, both sides already in the room. Lead with it.

ASK, IN THIS ORDER

1	"You said you were busy — what's coming up that you might need help on?"	The whole objective in one question. Everything else is there to make the follow-up specific.
2	"Are you on the Onni tower at Wilshire and Cloverdale?"	We already work for Onni. Their Draft EIR is four weeks old and no engineer is named. Warm on both sides — but confirm the Onni reference before leaning on it.
3	To Ken: "Where does your resource picture get tight over the next couple of quarters — which roles?"	He owns utilization, and Mosaic answers this by role and by date — it is literally the tool's output, so the question is easy for him and precise for us. Follow with <i>"what did you end up putting around Vantagepoint to get the reporting you needed?"</i> and agree with the answer. This is the opening for "we have resources available."
4	"What do you need from us to get back on the proposal list?"	Ask it plainly. It is the stated goal, and Dan is the one who can action it.
5	"Who's doing structure on the OCVIBE residential buildings?"	530 units. The drawings filed with Anaheim name thirteen consultants including geotechnical — and no structural engineer. The best-evidenced gap we have.
6	"What's taking you to Dallas?"	Two roles advertised for Texas on 21 August; no Texas office. Nobody has reported it. A flattering question that shows we pay attention.
7	"How is the Sa cap in the 2026 code landing on your podium plates?"	⚠ For Matt or a design principal, not Dan or Ken. The one question that puts KOR in the room as engineers. Islam is the right voice for it.

WHAT'S COMING AT MVE — SO "WHAT HAVE YOU GOT?" GETS A SPECIFIC ANSWER

▲ LIVE AND NOT LOCKED

5350 WILSHIRE Onni · 419 u · 46 st · Draft EIR 30 Jul 2026. **The Onni link makes this first.**

OCVIBE RESIDENTIAL Anaheim · 530 u · thirteen consultants filed, none structural.

SANTA CLARA PARK 1,792 u for The Irvine Company · approved, waiting on office leases to run out.

6201 RESIDENCES Culver City · 846 u · approved, start targeted this year — shortest fuse.

LEGACY PARK Mesa AZ · 2,500 u + 750 keys · entitlement still ahead.

RIVERWALK PH 2 17 of 20 parcels undesignated. They hold the master plan.

✗ DON'T RAISE AS LIVE WORK

- **Discovery Park is not theirs.** The Irvine Company's 1,858-unit Irvine entitlement went to **BDE Architecture**.
- **4002 Park Blvd** has been engineered since 2024 — not an open seat, though it hasn't gone vertical.
- **Snug Harbor is wounded, not dead.** The expansion was rescinded 6–0, but the 20,000 sf approval survives and they were still discussing it on 18 August. Don't congratulate — and don't commiserate.
- **Reserve at Silo Park** broke ground Oct 2025. **The Village at Riverwalk** is Gensler's. **Uptown Newport** is Shopoff's.

THREE THINGS TO HOLD IN YOUR HEAD

🚫 THE ONE THING NOT TO SAY

Not the name — the intent.

Glotman Simpson holds three MVE

jobs: Ritz-Carlton Newport, 3rd + Fairfax, and the Hillcrest tower.

Jim did two towers with MVE *while he was at Glotman*, so the name itself is his own history and perfectly sayable. What must never surface is that **displacing them on MVE's next Orange County high-rise is KOR's written number-one play.**

Also: **never quote their revenue** — sources disagree and none is a filing.

HOW MVE DECIDES

Shared, not top-down. Matt won't call it alone.

Cultivate the project architects under him — Jim has worked with **Luis Arambula**, **Pieter Berger** and **Paul Kearney**. **Pieter Berger** is the structural-selection voice on Orange County work. Recent hires worth name-dropping:

Catherine Tang (Marketing & Strategy, March) and **Janet Dennerline** (General Counsel, July).

THEY'RE GROWING, FAST

+7.4% headcount in six months, against +5.2% over twelve.

The recent half-year outgrew the one before it. Eight roles open, none in San Diego. Four LA projects surfaced in eight months against one in all of 2024. **Say the direction, not the headcount** — the absolute number is an estimate. It also corroborates Dan's own "we're busy."

Internal preparation for the MVE call, Thursday 27 August 2026, 10 AM. **Not for distribution to MVE.** Where a structural engineer is **not publicly named**, it means no public record names one — not that the seat is open. Full detail: KOR-MVE-Intel-Brief-2026-08-26.
