

Three developers entitling land in Phoenix, with no architect hired.

You asked what an early signal looks like. It is a developer who has filed to rezone land, retained a lawyer and a civil engineer, and named no architect. Three of those in Phoenix are named overleaf with the case numbers, alongside eighty-four pending petitions in Charlotte and thirty-six schemes in review in Raleigh. The Arizona submitted-projects search you asked for follows, with the currency of every source stated.

3 verified open seats

84 pending Charlotte petitions

Newest filed 14 August

LIVE, AND NOBODY HAS BEEN HIRED

Three Phoenix developers entitling land right now with no architect on the file

Every other list in this report is a record of decisions already taken. This one is not. These are companies that have filed to rezone land in Phoenix, engaged a lawyer and an engineer, and named no architect — in the narrative or anywhere in their own contact list.

WHO	WHAT THEY ARE	ALREADY ON THE TEAM	CASE
Fifield Companies fifieldco.com · Chicago	Founded 1977. \$7bn developed, 21m sq ft, 13,000 residential units. Urban infill mid- and high-rise multifamily; Chicago, LA, Dallas	Snell & Wilmer — counsel Wood, Patel & Associates — civil	Z-41-25-2
Vintage Partners vintagevp.com · Phoenix	Commercial real-estate development and investment, 2502 E Camelback Rd	RVi Planning Precision Civil Gammage & Burnham — counsel	Z-24-26-7
Elevation Living with Blueprint Capital	Blueprint Capital, Seattle, founded 2010. \$2bn of construction financing , workforce and multi-family housing, metro Seattle and Greater Phoenix	Rick Engineering — civil Earl & Curley — counsel	Z-82-25-5

Each of those teams is half-built. A developer does not retain land-use counsel and a civil engineer for a rezoning and then not build the thing. What they have not done is put an architect on the record.

✕ THREE WE REMOVED, AND WHY THAT MATTERS MORE THAN THE THREE WE KEPT

Twelve cases looked like open seats. Eight did not survive checking, and the checks are worth stating because they are the difference between a list and a liability.

Two had an architect hiding in a domain name. A case listing *2929.com* among its contacts is working with Deutsch Architecture Group; another listing *kontexture.com* is working with Kontexture, an architecture practice in Phoenix. Neither name says so.

One names its architect in the text but not in the contact list — Meritage Homes with BSB Design. Either signal alone gets it wrong, so a seat counts as open only when both are empty.

And one is a developer who does not hire architects. Cullum Homes looked like the strongest lead on the list until its own description settled it: an integrated design and construction firm that employs architects. Same category as the four on the previous page.

▲ THE SAME STAGE, WITHOUT THE FILTER, IN CHARLOTTE

Eighty-four rezoning petitions are pending in Charlotte, forty-eight filed in the last six months and the most recent on 14 August. Mid-America Apartments. RangeWater Development. Kittle Property Group. Middleburg. Pappas Properties. Crosland Southeast.

Charlotte publishes no design team at all, so we cannot tell you which of those has an architect — but every one is a developer who has just asked the city for something.

Raleigh adds thirty-six residential schemes in review, filed as recently as 14 August, twenty of them by the developer rather than their engineer — Greystar's Brier Creek active adult apartments among them.

What this does not claim. Not on the public record is not the same as not appointed; a developer can have an architect and simply not have filed their name. What is certain is that these companies are entitling land now, have engaged the consultants that normally come first, and have not put an architect in the file. That is a call, not a commission.

ONE PAGE

Six markets, and what each record holds today

Checked against every source on 28 August 2026. Raleigh had been updated that morning; Houston, Miami and Phoenix permits the day before. Phoenix is the one

exception and it is called out below. The last column gives the coverage behind each figure, which is not the same in every market.

MARKET	WHAT IS IN THE PUBLIC RECORD NOW	DESIGN-TEAM CONCENTRATION	HOW MUCH OF THE MARKET THIS COVERS
Phoenix Arizona	373 open site-plan and rezoning cases; 280 filed since Jan 2025; 41 of the recent ones still preliminary. Cases run three months behind; Phoenix permits are same-day	11 projects, 11 firms, top 18% and independently, from the city's rezoning record: 14 projects, 13 firms, top 14%	Two independent samples
Houston Harris County	4,087 new-construction projects since Jan 2024, 390 of them since 1 June 2026 , each with owner, cost, floor area and scope	3,085 name a design firm across 806 firms ; busiest holds 3% multifamily: 79 projects, 45 firms, top 10%	A census. Every qualifying project
Miami	66 projects through the city's design review since Jan 2024, by address and case number	35 with the architect confirmed, 13 firms, top 17% Arquitectonica and Kobi Karp tied on six each	35 of the 66 heard
Raleigh	Large multifamily permits 3 → 15 → ~11 across 2024, 2025 and 2026	11 projects, 7 firms, JDAVIS 36% acquired by ISG on 14 May 2025	11 projects — of 92 filings, 21 publish drawings
Las Vegas Clark County	Whole-project permits above \$10M, flat at 3–7 a year for five years ; the full permit sequence per scheme	Reported project by project — the record does not yet support a rate	Named projects only
Charlotte	86 pending rezoning petitions with the petitioner and the land	Not measurable. The design team is not on the record at the stage Charlotte publishes	Stated, not estimated

Phoenix submitted projects, from the city’s own record

Phoenix publishes a live planning and permit service carrying **68,292 permits and 13,022 plan reviews**, row-level. **Its newest record is from yesterday** — but that is not true of every part of it, and the difference matters more than the headline:

WHAT YOU QUERY IN PHOENIX	NEWEST RECORD	WHAT STAGE THAT IS
Building permits	27 Aug 2026 — yesterday	Already designed and building. Fire connections, haul routes, landscape
Site plan and rezoning cases	27 May 2026 — three months back	Entitlement. Where the design conversation happens

Phoenix posts its construction permits the next day and its planning cases about a quarter behind. So the city will tell you today about a job that is already someone else's, and tell you in three months about one that is still being shaped. That is worth knowing before you rely on it, and it is not a defect in the search — it is how that city publishes. Nevada, Miami and Raleigh do not behave this way; Raleigh's development plans were updated the morning this was written.

None of which makes the entitlement list stale in the way a permit list would be. **A scheme that filed a preliminary site plan in May is still in entitlement now** — that process runs in quarters, not days. Filtered to site-plan and rezoning cases the record returns **373 open cases**; filtered to those submitted since 1 January 2025, **280**; of which **around forty read as residential from the project name** — that last step is a judgement on the name rather than a field in the record, so treat it as an indication and not a count. The 373 and the 280 are exact.

The stage column matters as much as the name. A **preliminary** filing is a scheme still being shaped; a **final** one is a scheme committed. Both appear below, and the difference tells you how much of the design conversation is still open.

SUBMITTED	CASE	PROJECT	ADDRESS	STAGE
12 May 2026	2602491	Momentum Apartments	734 E Vineyard Rd	Preliminary site plan
6 May 2026	2602468	Senior Housing at 41st Ave	2700 N 41st Ave	Preliminary site plan

SUBMITTED	CASE	PROJECT	ADDRESS	STAGE
21 Apr 2026	2602361	17th St Apartments	1634 E Wood St	Preliminary site plan
9 Apr 2026	2602015	Sagewood Phase 4 — residential & clubhouse	4400 E Palo Verde Dr	Preliminary site plan
1 Apr 2026	2601847	Virginia Townhome Project	4840 E Virginia Ave	Preliminary site plan
25 Feb 2026	2601066	Maryland Townhomes	742 E Maryland Ave	Final site plan
6 Feb 2026	2600890	Lion Foundation Housing	1415 E Wood St	Preliminary site plan
24 Dec 2025	2507260	Deer Valley Apartments	3010 W Deer Valley Dr	Final site plan — major
11 Dec 2025	2506990	34th & Thomas Apartment Homes	3425 E Thomas Rd	Preliminary site plan
9 Dec 2025	2506904	4th St Residences	4144 S 4th St	Final site plan — major
9 Dec 2025	2506899	Sierra Verde Townhomes	4800 S 16th St	Final site plan — major

Eleven of the forty-one, newest first. The full set travels with this document.

✗ TWO THINGS THIS LIST IS NOT

It is a snapshot, not a trend. Every row carries status OPEN, because closed cases leave the layer. Counting them by year would show 2024 smaller than 2025 and that would mean nothing — older cases have simply had longer to close. Anyone who hands you a submissions-per-year chart built from this feed has made that mistake.

And it does not name your architect competitor. The feed has a field called PROFESS_NAME, populated on 90.6% of plan reviews, and the name promises exactly that. Read the values and it is the licensed *contractor* — the most frequent entries are “TO BE BID”, “OWNER”, fire-sprinkler firms and solar installers. It is genuinely useful for who *builds* in Phoenix. It is not an architect and we will not present it as one.

Scottsdale is the instructive one. Its long-standing case service is the cleanest we tested anywhere — 82 cases with all eight fields populated on all 82 rows, applicant included. And the newest submittal in it is **25 February 2026**, because the city moved to a new portal that January and the old map only covers what came before. **A feed**

can be flawless and still be frozen, and the only way to know which you are holding is to query it and read the dates rather than the documentation.

The successor is open. Scottsdale’s current portal answers the public without an account and returns **11,673 permit records and 733 plan records for 2026**, each with number, type, status, parcel, address and applied date. **The city did not stop publishing; it moved.** That is worth checking before any market is written off — three of the six markets here had a feed that looked dead and a live successor nobody had followed.

▲ ON THE TEST YOU SET US

You asked what happens to a 40-storey project filed that morning. **It is not in any public feed yet, and nobody’s is.** It surfaces when the city posts the case or the trade press picks it up. In Raleigh or Miami that is days; **in Phoenix, entitlement cases run about a quarter behind, so there it is months.** We would rather tell you which city is which than average them. The defensible claim is that nothing published gets missed. It is not that nothing unpublished is known, and we would rather say so than have you find out by testing it.

THE ACTUAL QUESTION YOU ASKED

The same search, running in all six markets

You asked for Arizona. The fair test of whether that is worth anything to you is whether it runs everywhere you work — so here is the same search, in every market you named, with the date each record was last current.

MARKET	WHAT THE PUBLIC RECORD CURRENTLY HOLDS	CURRENT TO
Phoenix	373 open site-plan and rezoning cases ; 280 filed since Jan 2025; around forty residential , each with its stage	Cases to 27 May permits to 27 Aug
Houston	390 new-construction projects registered since 1 June 2026 alone, running about 370 a month across 2026, each with its scope, cost and floor area	27 Aug 2026
Miami	66 projects through the city’s design review since Jan 2024, by address and case number	Jul 2026 sitting

MARKET	WHAT THE PUBLIC RECORD CURRENTLY HOLDS	CURRENT TO
Las Vegas · Clark County	Whole-project permits above \$10M, plus the full permit sequence per scheme — 79 records on the ballpark alone	day queried
Raleigh	Large multifamily permits by year — 15 in 2025, tracking ~11 in 2026	Aug 2026
Charlotte	86 pending rezoning petitions with petitioner and land — but no design team at this stage	Aug 2026

Six markets, one method, and it is current to yesterday in the largest of them.

The Phoenix list is the one you asked to see, so it is printed in full above; the others are the same query pointed at a different city. Nothing here is a subscription feed or a purchased database — it is the public record of each jurisdiction, which is why it can be re-run on any Monday and be right.

▲ THESE ARE ENTITLEMENT-STAGE RECORDS, WHICH IS EARLIER THAN AN ARCHITECTURAL APPOINTMENT

Phoenix's cases are site-plan and rezoning filings. Miami's are design-review submittals. Charlotte's are rezoning petitions. **None of these is a building permit** — they are the stage at which a scheme is still being argued with the city, which is why Charlotte's filings name a petitioner and no design team at all: at that point one has not always been appointed.

That is the stage planning work is bought at, and it sits ahead of the architecture decision rather than after it. The Phoenix table above marks each case preliminary or final for exactly this reason — preliminary is a scheme still being shaped, final is one already committed, and the difference tells you how much of the conversation is still open.

WHAT THIS CAN REACH

Three markets that looked closed are open, and current to today

Clark County, Dallas and Charlotte all publish nothing useful in their open-data feeds — each stopped in 2020, 2021 and 2022 respectively. They did not stop building. **They changed permitting systems, and all three moved to the same platform.** Their live records are public, and reachable without an account:

JURISDICTION	OLD FEED STOPPED	LIVE RECORD, VERIFIED
Clark County — the Strip	Feb 2021	Current to the day queried
Dallas	Mar 2020	Current to the day queried
Charlotte	May 2022	Aug 2026

Worked example. The Athletics ballpark on the former Tropicana site returns **79 county records**, March 2025 to August 2026 — precast packages, electrical, fire apparatus access, grading, phased building permits. That is the construction sequence of the largest project on the Strip, permit by permit, from the public record.

▲ THE EARLIEST SIGNAL A CITY HOLDS

Dallas has logged roughly **197 pre-development meetings in 2026** — the first formal contact a developer has with the city, *before* entitlement, before the design team is chosen, before any of it reaches the trade press. Eighty-nine are visible.

⚠ Being straight about it: those Dallas records carry a date, a number and a status, **but no project name and no address**. It is a measure of how busy the market is, not a list of leads. Clark County does name its projects and their status, so there the same query is genuinely actionable. **The value differs by city and we will always say which.**

Texas does not stop at Houston. Dallas, Fort Worth, Austin and San Antonio are held to the same depth, and that detail already exists — it is left out here for readability rather than because it is missing. Four more market tables would not have made this document better. Ask and it follows.

THE OTHER FIVE

What the layer holds in the rest of your markets

Same standard throughout: a firm appears against a project only where that firm's own page, the developer's own release, or the public record says so. Where the design team is incomplete the gap is shown rather than filled.

MARKET & PROJECT	DEVELOPER	ARCHITECT	CONTRACTOR
NEVADA · A's Ballpark, Las Vegas 33,000 seats, 2028	The Athletics	BIG + HNTB	Mortenson–McCarthy
NEVADA · Bally's Integrated Resort 26 ac, former Tropicana	Bally's Corp / JLL	Marnell Howryla	—

MARKET & PROJECT	DEVELOPER	ARCHITECT	CONTRACTOR
NEVADA · Silverado, Clark County 13.5 ac, heard 2 Sep 2026	Ochoa Development	Gensler + Yihong Liu	—
HAWAII · Kalae, Ward Village 330 homes	Howard Hughes / Victoria Ward	Solomon Cordwell Buenz	Layton
HAWAII · Ālia, Kaka’ako 457 units, 39 storeys	Kobayashi Group	WRNS Studio	—
HAWAII · Launiu, Ward Village 486 homes, 40 storeys	Howard Hughes	Arquitectonica	—
HOUSTON · The Lily River Oaks 38 storeys, 331 units	Southern Land Co.	Solomon Cordwell Buenz	ANDRES
HOUSTON · The Langley 20 storeys, 134 units	StreetLights + Hunt	StreetLights Creative Studio	SLR
DALLAS · Lucille, Uptown 22 storeys, 265 units	Endeavor Real Estate	HKS	Rogers-O’Brien
MIAMI · Waldorf Astoria 100 storeys, 360 residences	PMG	Sieger Suarez + Carlos Ott	—
MIAMI · Delano Residences 90 storeys	PMG	Carlos Ott · CUBE3 (AOR)	—
CHARLOTTE · Queensbridge Collective 755 units, \$725M	Riverside + Woodfield + PGIM	Goettsch Partners	Clark
RALEIGH · Tributary, North Hills 332 units	Kane Realty	Hickok Cole	John Moriarty

Every architect above was read off the developer’s own release, the architect’s own project page, or the city record — never inferred. A dash means no public record names that role yet, which is not the same as the role being unfilled, and we would not present it as one.

Two developer names are worth isolating. *PMG* holds both Miami supertalls and used Carlos Ott on each, with CUBE3 carrying architect-of-record on the second — a developer running the same design relationship twice. *Kobayashi Group* is the counter-example: an independent Honolulu developer, sitting under Kamehameha Schools’ Kaia’ulu ‘o Kaka’ako master plan, which means **more towers behind it on the same landowner’s ground.**

▲ ONE PATTERN WORTH YOUR ATTENTION

SCB — formerly Solomon Cordwell Buenz — is in two of your six markets — Kalae in Honolulu and The Lily River Oaks in Houston — on residential towers of 330 and 331 units respectively. Both confirmed from the developers' own releases. Whatever else the six markets have in common, one firm is already moving between them the way you are.

WHERE NOT TO SPEND THE CALL

Four developers that will not hire an outside architect

This falls out of the same data and is the part we would want if the positions were reversed. These are developers whose design work is structurally unavailable — not because they said no, but because of how they are built.

DEVELOPER	PROJECTS	WHAT THE RECORD SHOWS
Creation Equity	6 — the most active developer in the set	LGE Design Build on all six : five as design-builder, one as contractor alongside GFF Design. No outside architect appears on any Creation Equity project
Ryan Companies US	4	Developer <i>and</i> general contractor on all four, and it brings its own architect — Butler Design Group on three, Deutsch on the fourth
Statesman Group	1 (565,729 sf, six buildings)	Developer and contractor both. No architect named at all
StreetLights Residential	The Langley, 134 units	Fully vertically integrated: StreetLights Creative Studio is architect and interior designer, SLR Construction is the general contractor. Every seat in-house

The Butler–Ryan pairing is worth isolating: it is the **only architect-to-contractor relationship that repeats more than once** anywhere in the 50. Three projects together. Everything else in Arizona is a one-off pairing, which is another way of

saying the same thing as the first section — this market has very few locked relationships.

KOR Structural, prepared for MVE + Partners, 28 August 2026. Every figure is drawn from public municipal records or from the published statements of the parties named. Where something could only be sourced to secondary reporting it was left out rather than hedged. Happy to walk through any single number on a call.
