

Namdar Group — counterparty dossier

RFP "Park + Broadway," East Village, San Diego · 7 August 2026 (corrected 2026-08-07 after independent fact-check)

BOTTOM LINE

Namdar Group is a real, capitalised, ground-up high-rise developer — **not** the distressed-mall operator you may be thinking of. They have a two-tower, 43-storey, 1,394-unit project topping out in Miami right now on a \$460M facility. The opportunity is genuine. Two things to stay disciplined about: they **appear not to own the San Diego site yet**, and a competitor's name (**MKA**) is already pencilled into the structural slot.

1979 Family firm, three generations	1,394 Units under construction, Miami	\$460M Single Miami debt package	10,000+ Units in pipeline (their claim)	0 Prior West Coast projects
---	---	--	---	---------------------------------------

Read this before the meeting. The Park & Broadway site is currently being marketed for sale by **Newmark** on behalf of the seller — advertised as "Downtown San Diego's last multi-block residential development opportunity." **Kilroy Realty** still lists it as an active development holding. Nothing public confirms Namdar has closed; their specific pursuit is known from the RFP itself, not from press. Treat this as a buy-side underwriting exercise until they say otherwise — your fee may be an input to their bid, not a commission on a funded job.

WHO THEY ARE — AND WHO THEY ARE NOT

Two firms share the Namdar name, both out of Great Neck, NY. They are **separately run, legally and operationally distinct businesses — but related by family** (adjacent Great Neck offices; The Real Deal calls the network "the Namdar clan"). Don't call them "unrelated" in the room — someone who knows the Great Neck scene will correct you. The distinction that matters is the *business*, and it cuts in your favour: the weaker retail reputation is not your counterparty.

	NAMDAR GROUP — YOUR COUNTERPARTY	NAMDAR REALTY GROUP — NOT IN THIS DEAL
Run by	Joel Namdar	Igal Namdar
Founded	1979	1999
Model	Ground-up mixed-use, transit-oriented development	Distressed / value retail acquisition; ~70M sf
Domain	namdargroup.com	namdarrealtygroup.com
Relevance	Builds residential towers	Owns malls. Not this deal.

Namdar Group: family owned and operated, HQ 98 Cuttermill Road, Great Neck Plaza NY, ~22 staff. Self-described focus is "large-scale transit-oriented developments," ground-up, across US urban cores and the Caribbean. They claim 10,000+ residential units in various stages of approval/development; Noah's email to you says 15,000+ — note the gap.

LEADERSHIP

NAME	ROLE	BEARING ON YOU
Joel Namdar	Chief Executive Officer — runs the firm	The decision-maker. verified
Daniel Namdar	Chief Operating Officer	—
Effy Namdar	Chief Investment Officer	CC'd on your email — capital is watching.
Andrew Namdar	Chief Financial Officer	—

THE THREE PEOPLE ON YOUR EMAIL

Christina Attiyeh — Director, Development Design verified

christina.attiyeh@namdargroup.com. Previously S9 Architecture (Intermediate Architect → Associate) on mixed-use high-rise, schematic through construction administration; Ambassador, Women in Construction, New York Build 2025. Has run Namdar's Brickell 42-storey (1,011 units, 599 micro) and the Jersey City work. **She is your real day-to-day counterpart** — an architect by training who will evaluate KOR on design coordination, not just price. Pitch to her accordingly.

Effy Namdar — Chief Investment Officer verified

A CIO on a first-contact RFP thread means capital is watching. Schedule and cost certainty will matter to him more than engineering elegance.

Noah Namdar — sender not publicly verifiable

Signs as Namdar Group; office 516-986-2495, direct 516-666-3018 (Long Island, consistent with Great Neck). No public profile found. Most likely a younger family member or an acquisitions associate without a public footprint — common, and not in itself a red flag. But he is the one applying the time pressure and the one name on the thread that doesn't independently check out.

Confirm his role in the first five minutes.

TRACK RECORD — THEY DO BUILD

The Miami job is a direct analogue of what they're asking you to price.

222 / Namdar Towers — Downtown Miami under construction

Address	222 NE 1st Ave (55 NE 2nd St / 50 NE 3rd St), Miami
Scale	Two towers, 43 storeys, 448 ft, 1,320,144 sf, 1,394 units, 336 stalls
Phase 1	680 units, 358,000 sf — topped off late 2024, completion first half 2026
Phase 2	714 units, 395,000 sf — vertical began March 2026, completion 2028
Team	Architect Behar Font & Partners · Structural De Los Reyes Engineering · GC John Moriarty & Associates of Florida · TWR (MEP) · Graef (civil)
Capital	SCALE Lending (Slate Property Group) — \$390M, upsized to \$460M (incl. \$230M bridge)

Jersey City — Journal Square (one evolving site)

A single Journal Square development, not two: the earlier **"Park Tower" concept at 629 Newark Ave** (47 storeys, ~1,151 units, C3D Architecture, Feb 2025 rendering) evolved into the approved **"8-16 Lott Street"** scheme — ~1,049 units (incl. 105 affordable) plus 26 hotel rooms, approved by the Jersey City Planning Board June 2026, with the 629 Newark façade preserved within the footprint. Financing across the site: \$96M (2021), \$32M (Journal Square), \$358M to break ground. *Count it once.*

Miami — Brickell

42-storey, 1,011 apartments, 599 of them micro-units. Christina Attiyeh involved.

WHAT THIS TELLS YOU

They **repeat-hire regional structural engineers local to each market** (De Los Reyes in Miami, C3D-adjacent teams in NJ) rather than carrying one national firm. Good for KOR — the San Diego seat is winnable on **local merit**, not incumbency. They're also used to a local SE carrying a 43-storey concrete tower through permit.

THE SAN DIEGO PLAY

Site	901 Park Blvd (West Block) + 1335 Broadway (East Block), San Diego 92101 — two full city blocks, East Village. 120,661 sf / 2.8 acres. APN 534-341-10, 534-341-11, 534-342-14. CCPD-NC, FAR 10.0 before bonuses; ~1.2M sf pre-bonus.
Current owner	Kilroy Realty — acquired Oct 2019 for \$40M; still listed as "Kilroy East Village," 1,100 units.
On market	Newmark exclusive advisor to seller (Rick Reeder, Brunson Howard, Brad Tecca, Kevin Shannon, Tanner Harris; debt Ramsey Daya, David Milestone, Henry Cassiday).
Architect	Carrier Johnson + CULTURE — engaged.

Two schemes in the package — do not price the wrong one

SOURCE	WEST BLOCK	EAST BLOCK	TOTAL UNITS
Concept Plans (15 Jul 2026)	Tower 1 — 42 lvl, 808,874 sf, 887 u, 274 stalls	Tower 2 — 42 lvl, 678,460 sf, 840 u, 160 stalls	1,727
Dev. Study "OPT C" (18 May 2026)	44 lvl, 1,996 u, 537 stalls, FAR 21.96	43 lvl, 2,089 u, 645 stalls, FAR 23.00	4,085

Both concept towers are 419.41 ft above average grade. The Carrier Johnson schedule is titled "901 Park BLVD — West Block Phase 1 (Towers A&B)", which matches neither sheet cleanly. That's a **2.4x spread** in units — establish the basis of design before any number leaves the office.

The schedule is real, and it is tight

15 Aug 2026	Begin grading / shoring plan (FEI, ESSI, geotech)
30 Aug 2026	100% Schematic set · structural marked "Engage Mid of SDs"
1 Oct 2026	Grading permit submittal (10-month review)
30 Nov 2026	100% DD / 30% CD — building permit set
28 Feb – 15 Mar 2027	50% CD → 100% CD (final bid set)
1 Aug 2027	Grading permit issued

Noah's "selecting this week" is consistent with a 100% SD set due 30 Aug — the urgency is structural to the programme, not purely a sales tactic.

THE COMPETITIVE PICTURE

MKA is already pencilled into the structural slot inference

On Carrier Johnson's own project-team table the Structural row shows *Engaged: NO* — "Engage Mid of SDs." But the Firm cell on that row carries the text "**MKA**", set at 8.0pt against the table's uniform 5.8pt body — i.e. typed in after the table was built, sitting squarely in the Structural row band. "MKA" is almost certainly **Magnusson Klemencic Associates** (the document never spells it out — placement is fact, the expansion is inference). Both MKA records already exist in our graph as Competitor (org 68742, 113898).

Jim is not bidding into a vacuum — he's bidding against a name someone has already written down. **The counter is local:** MKA is Seattle-based; KOR has built this typology on this street.

Engaged consultants: Carrier Johnson (architect), Fuscoe Engineering (civil, org 77639), Weiss (environmental), Allen Matkins (zoning counsel). **Still unengaged:** structural, MEP, landscape, geotech, traffic, wind, interiors.

THE REFERRAL IS ALREADY OURS verified in graph

Noah wrote "Duane at Carrier Johnson referred us." **Duane Hagewood**, Principal at Carrier Johnson (dlh@carrierjohnson.com), is already in our Brain (IntelPerson 5022, org 112) — and the concept-plans PDF in Namdar's own RFP package carries the author metadata "**dlh**": Duane personally drew the sheets they sent you. This is a warm handoff from a CJ principal already on our map, using his own drawings. **Thank Duane directly**, before or right after the Namdar meeting — he can also tell you whether MKA is real or a placeholder.

KOR HAS ALREADY ENGINEERED THIS BLOCK Deltekt-confirmed

Our portfolio map pins a KOR project at **1355 Broadway** (architect JWDA, 32.71566 / -117.15239 — Broadway & 14th, the NE corner of the East Block). Kilroy lists its East Village holding at that exact address. **Confirmed in Deltek: project 31058-01 "1355 Broadway San Diego," JWDA, active.** The addresses, coordinates and owner all line up — KOR has done structural on a tower scheme for this exact block (a JWDA/Kilroy scheme, distinct from Namdar's Carrier Johnson design). This is the single strongest thing Jim can put on the table: *we have already designed a tower on your dirt.*

Walking distance: 1355 Broadway (JWDA), 800 Broadway, 1011 Union St, Courthouse North Block, 1st & J, The Fellow, 1st & Island — plus Jim's prior downtown record (Park & Market, 11th & Broadway, 15th & Island, Vantage Pointe). The densest cluster on KOR's entire California map.

SITE & STRUCTURAL REALITY

Both geotechnical/fault reports were prepared by **Leighton Consulting** (Roy N. Butz, CEG 2752; Nicholas J. Tracy, GE 3058) **for Kilroy Realty in 2022 — not for Namdar.** The two blocks are not the same risk.

901 Park Blvd (West Block) — fault through the corner. "The northeast corner of the site is transected by the main Holocene-active fault forming the western boundary of the Downtown Graben... a risk of ground-rupture hazard." Leighton requires a minimum 20-ft structural setback each side — a **40-ft no-occupancy corridor**, NW–SE trending, vertically dipping (Fig 2, Plate 1). Suitable "excluding the setback zones." Report 13488.001, 10 Jun 2022. **The West Block is Phase 1 — the block they want priced first is the block with the fault through it.**

1335 Broadway (East Block) — clean. "Not transected by pre-Holocene or Holocene-active faults. Fault-rupture hazard low... not a constraint." No structural-setback section. Report 13487.001, 11 May 2022.

PARAMETER	BOTH BLOCKS
Site Class	C
Mapped MCE	Ss 1.502g · S1 0.506g
Design spectral	SDS 1.201–1.202g · SD1 0.504g
Rose Canyon fault	~0.7 mi west
Liquefaction	Not susceptible (dense Old Paralac / San Diego Fm)
Groundwater	Not encountered; design +5 ft msl; no dewatering anticipated
Foundation	Structural mat; 10,000 psf at 24" embedment, to 15,000 psf max
Shoring	Cantilever soldier pile, or tied-back if <1" movement required

The geotech does not describe the building they now propose. Both 2022 reports assume "an approximately 39-story tower with 3 levels of below-grade parking." The current concept is **42 levels with zero below-grade** — parking stacked above ground, L1–L8. The 10,000 psf bearing values explicitly assume "a minimum excavation depth of ~30 feet." That assumption no longer holds. The reports are stale in basis as well as date, are addressed to a different party, and geotech is still marked NO on the team list. **KOR cannot rely on them without a reliance letter from Leighton, and a supplemental will be needed.** Say this out loud in the meeting — it's the kind of thing that makes an engineer look like the adult in the room.

RISKS AND HOW TO HOLD THEM

RISK	READ
Site not yet owned	Actively marketed by Newmark. A fee given now may be underwriting input for a bid that never closes — highest-probability outcome of a rushed free proposal is unpaid work.
"Selecting this week"	Corroborated by the 30 Aug SD deadline — but urgency + a big pipeline promise is also the classic setup for a discounted fee. Price this project on this project.
Pipeline claim	10,000+ units publicly; the email says 15,000+. Minor, but note who inflates.
Scope undefined	1,727 vs 4,085 units across two document sets. No basis of design.
First West Coast project	No Namdar Group project found in CA or anywhere on the West Coast. CA seismic detailing, SD DSD review culture and OSHPD-adjacent expectations will be new to them — an argument <i>for</i> a local SE; make it.
Unverified sender	Noah Namdar doesn't independently check out. Effy and Christina do.
Cross-border entity	Confirm which SPE will sign, and that a Canadian firm contracting into CA is acceptable to their counsel. KOR carries the CA credentials — make sure the contracting entity is clean.

MEETING PLAYBOOK — ASK THESE, IN THIS ORDER

- **"Where are you in the acquisition?"** Under contract, in DD, or still bidding? Everything else depends on the answer. If still bidding, the right product is a budget letter, not a fee proposal.
- **"Which scheme is the basis of design — the 1,727-unit concept or the 4,085-unit study?"** And is Phase 1 one tower or two (A&B)?
- **"Who else are you talking to for structural?"** Then, if it doesn't come up: "I see MKA on the schedule — where did that land?" Asking directly beats pretending not to have read it.
- **"Do you have a reliance letter from Leighton, and who is picking up the supplemental?"** The reports are Kilroy's, four years old, and describe a 39-storey building with three basements you're no longer building.
- **"How are you handling the fault setback on the West Block?"** The 40-ft corridor through the NE corner is a design constraint, not a footnote — it drives tower placement, core location and podium framing.
- **"Who is the GC, and when do they come on?"** Miami used John Moriarty. A GC on board early changes how the structural scope is staged.

POSITION KOR ON THIS

- **Local depth, on this street.** Seven-plus KOR towers within walking distance, plus Jim's prior downtown high-rise record — and a Deltek-confirmed KOR/JWDA scheme on the East Block itself (1355 Broadway).
- **The fault is the differentiator.** A 40-ft Holocene-active setback bisecting the corner of Phase 1 is not a generic tower problem — it rewards an SE who has worked Rose Canyon-zone downtown sites. Lead with it; it reframes selection from price to competence.
- **Carrier Johnson already trusts us.** SE of record on West / 1011 Union. Hagewood referred them and drew the concept sheets. The architect relationship is the moat — protect it regardless of how this RFP lands.
- **Fee posture.** Do not discount against the pipeline promise. If they're pre-close, offer a paid or clearly-scoped budget-level opinion and reserve the full fee for a funded project. Get the basis of design in writing before any number.

KOR Structural business development · 7 August 2026, corrected 2026-08-07 after independent fact-check (leadership: Joel Namdar is CEO; the two Namdar firms are separately run but family-connected, not "unrelated"; the Jersey City work is one evolving site; Miami Phase 1 completes first half 2026; the 1355 Broadway KOR link is Deltek-confirmed). Verified claims tagged; inferences marked. Facts decomposed to the KOR intelligence graph (CanonicalOrg 658682).
